Observations:

- Flexible word order: OV~VO

Q&A:

- Q: What conditions choice?
- A: Information Structure (given/new O)
- A': OV is basic, VO derived
(old information “moves”)

An alternative?

- Gibson et al. 2013: VO to disambiguate
GF of sole argument in “noisy” channel

- VO languages common focus-final (Jackendoff 1972 et seq)
- Russian (VO) (Neeleman & Titov, 2009; Bailyn, 2012; Titov, 2012):
 - Right Focus: new information focus occurs clause-finally (IK1)
 - O_{old} may but need not front (also contrastive focus)
- Old English (VO) (Struik & van Kemenade 2022)
 - “discourse-given, lexical objects are optionally OV, but that new objects are near-categorically VO”

Loosely: Given precedes new

- OV languages: post-verbal foci rare (Borise 2019)
- Turkish (OV) (Kornfilt, 2005; Şener, 2010):
 - preverbal focus, O_{old} scrambled (L or R)
 - postverbal constituents must be background (given, non-topic)

Generalization: “focus” in most deeply embedded position
old information can/must be in “derived” position

Schmerling (1976); Gussenhoven (1983); Selkirk (1984); Arregi (2016)

Turkish: SOV

- (3) I know that my wife asked Pelin, Pinar, and Can each to read a famous book by Orhan Pamuk titled “White Castle” in her class last week. I ask her today:

A: What happened with that reading assignment of yours from last week?

- (4)
- a. # Yalnızca Pelin **kitab-ı** **oku-muş**. SOV
only Pelin book-ACC read-PAST
 - b. **Kitab-ı** yalnızca Pelin **oku-muş**. OSV
book-ACC only Pelin read-PAST
 - c. Yalnızca Pelin **oku-muş** **kitab-ı**. SVO
only Pelin read-PAST book-ACC

‘Only Pelin read the book.’

A “Noisy Channel” Alternative?

Gibson et al. (2013):

dog chased

Assumptions:

- No case marking
semantically reversible (animate), 1 NP “missing”
- S-initial (Universal strong trend); ($S > O$)
- SOV, SVO, VSO

Proposal use of SVO order disambiguates

Prediction preference for VO order for **animate O**

(NB: Gibson et al. (2013) consider only gesture, no actual language data)

Noisy Channel?

- Main driver of OV~VO is IS, not animacy
- small effect of animacy, various potential sources
- since $S \rightleftharpoons$ topic, IS alone enough to resolve GF
- missing/dropped NP most likely topic
- S can be post-verbal
- Noisy channel effect doesn't seem to contribute to explanation of alternation

Conclusions

Questions:

- Descriptive: what conditions OV~VO?
 - IS: O_{New} V O_{Old}
 - obscured by: perception complements, N-construction
- Analytical: Mixed word order?
 - Itelmen is an OV language, like other OV langs
 - optional extraposition of O_{old}
- Theoretical: Role of Communicative Efficiency?
 - Recognizing role of IS and context reduces the putative ambiguity
