

The Economic Outlook: Pandemic and Recession

Karen Dynan

Harvard University and Peterson Institute for International Economics

Spring 2020 Global Economic Prospects Meeting

Washington, DC

April 10, 2020

Shutdowns and other measures are slowly bending the COVID-19 curve

Cumulative Deaths from COVID-19

Source: European Centre for Disease Prevention & Control; Macrobond; author's calculations.

But containment measures (and choices to stay home) are causing a plunge in economic activity

Unprecedented drop in consumer demand for many services

Sharp slowing in production of many goods as employees cannot get to work and supply chain disruptions take hold

Knock-on effects include liquidity crises, drops in asset prices, and surge in unemployment

The pace of the rebound depends on 3 key factors

How dangerous and contagious is the virus?

How quickly can countries build capacity for testing, tracking, and other means of reducing contagion after shutdowns are eased?

How much can aggressive policy responses limit the damage to economic structures during the shutdowns?

Pandemic causes a sharper global slump than the financial crisis, with significant recovery thereafter

Real GDP Growth

Many small businesses are operating on thin margins

Median Cash Buffer Days for Small Businesses in Selected Cities

Note: Cash buffer days measured from 2013 to 2017.
Source: JPMorgan Chase & Co. Institute.

43% of small firms reported challenges paying operating expenses in 2019

30% reported challenges making payments on debt

The United States has taken aggressive monetary and fiscal policy steps

Dramatic action by the Federal Reserve:

- Cut in policy rate and large-scale asset purchases
- Lender-of-last-resort interventions building on financial crisis playbook, including liquidity facilities aimed at domestic strains and swap lines with other central banks

Unprecedented expansion of fiscal policy:

- Address public health needs
- Limit damage to the economic structure
- Protect the vulnerable
- Stimulate demand

Fed policy response—commitment to “whatever it takes”

Federal Reserve System Balance Sheet, Total Assets

Note: Shaded regions denote recessions.

Source: Board of Governors of the Federal Reserve System; Macrobond.

US fiscal policy response—more than \$2 trillion so far

Note: Excludes about \$345b in tax relief, social safety net funding, and other miscellaneous spending.

Source: Committee for a Responsible Federal Budget; author's calculations.

US fiscal policy response—what comes next?

Implementation of the CARES Act is challenging and crucial

Automatic stabilizers will also buffer the downturn and widen the budget deficit—by about \$1 trillion this year

Phase 4 of fiscal relief will probably include more funds for small business lending, more support for state and local budgets, an extension of expanded UI benefits, and more

US federal debt will jump upward, but financing costs are very low and are unlikely to rise sharply

U.S. Federal Debt Held by The Public

Note: Assumes \$3 trillion of additional COVID-related measures, extensions of existing fiscal measures, and extension of 2017 tax cuts.
 Source: Congressional Budget Office; Office of Management and Budget; Macrobond; Jason Furman's calculations.

10-Year Treasury Yield

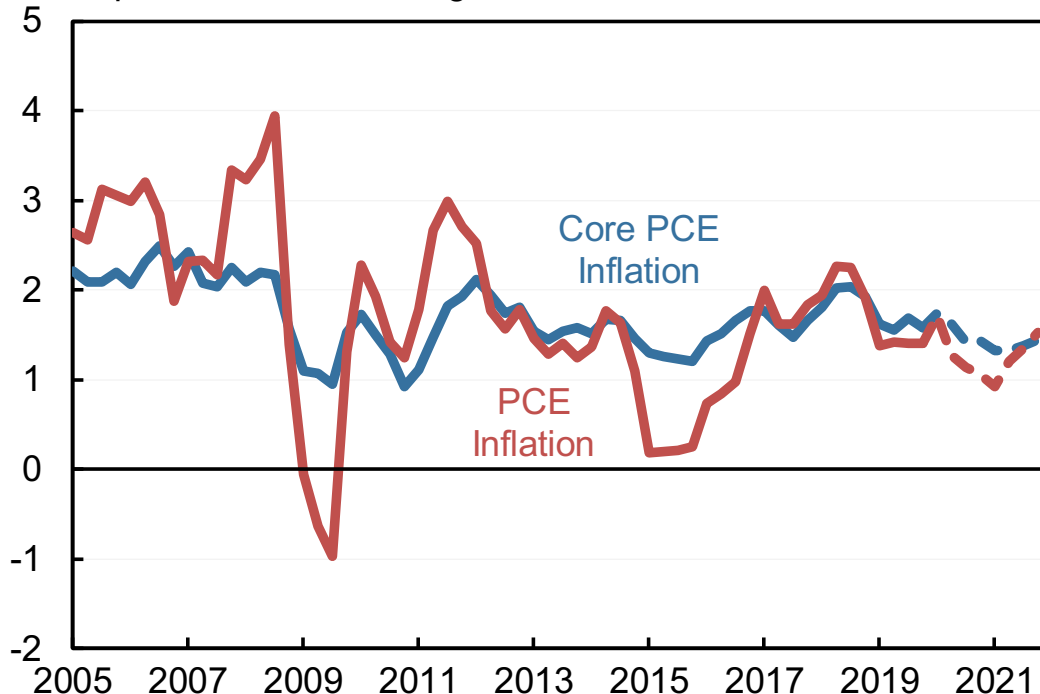

Source: Board of Governors of the Federal Reserve System; Macrobond.

US Inflation will be buffeted by cross-currents but the net effect of crisis is likely to be negative

PCE Inflation

Four-quarter Percent Change

Note: Dashed segments are forecasts.

Source: Bureau of Economic Analysis; Macrobond; author's calculations.

Supply constraints
will raise the price of
some goods

At the same time, we
are already seeing
softness in prices in
some services and
goods sectors where
demand has dropped
sharply

Confidence bands for the global economic forecast are especially large now

Neither epidemiologists nor economists have any analogous experiences in modern times on which to base their forecasts

Indicators to watch include:

- How quickly deaths and hospitalizations flatten out in Europe and the United States
- The extent to which countries in South Asia, Africa, and Latin America become infected
- China's success at rebooting its economy
- The rate at which testing increases in the United States

Addendum: Real GDP Growth Rates

Real GDP Growth (Y/Y)	2019	2020	2021
Global Output Growth	2.9	-3.4	7.2
United States	2.3	-8.0	10.2
Euro Area	1.2	-12.0	12.0
Japan	1.0	-8.0	3.8
United Kingdom	1.3	-9.0	8.5
China	6.1	1.5	8.0
India	4.8	-0.5	8.0
Russia	1.1	-1.5	2.5
Brazil	1.2	-6.0	0.5
