Trafalgar Garment District (TGD)

Objective:

To determine and analyze the factors that are conducting the transformation of TGD garment urban cluster.

Research question:

What are the factors that have conducted to the emergence and evolution of the TGD as a garment cluster from the 20th century until today?
Garment districts: a multiapproach review (1/2)

Configuration of garment clusters in urban areas: urban agglomeration economies

New York Garment District (NYGD)

Garment districts: a multiapproach review (2/2)

The evolution of economic spaces: lock-in and path dependence

Evolutionary Economic Geography (Martin and Sunley, 2006; Boschma and Frenken, 2006)

Path dependence (David; 1985; Arthur, 1989)

Lock-in: Functional, cognitive and political (Grabher, 1993)

Evolution of economic sectors at different scales:

• At a region scale: Textile industry in Westmünsterland (Hassink, 2007) and Daegu region (Cho and Hassink, 2009).

• At an urban scale: Garment industry in New York (NYGD) (Rantisi, 2001, 2002ab, 2004).
Garment districts: a multiapproach review (2/2)

The evolution of economic spaces: lock-in and path dependence

The evolution of the NYGD (Rantisi 2001, 2002ab)

How does the NYGD face external shocks and avoid lock-in processes?

Shift from ready-to-wear to fashion: small batch productions (season collections).

A network of intermediaries services that support the fashion-related firms.

Local production culture or local synergy.

The NYGD as an open system. Entrance of information of garment design-based firms in Lower Est Side (variety).
Case of study

The emergence of the TGD: 1916-1954

- Transport infrastructures key in the TGD’s location.
- Proximity to business services (CBD) (Collel i Vidal, 1989).
- «Industrial atmosphere». 18th – 19th centuries.

Density of garment-related firms in Barcelona and in the TGD between 1916 – 1954. Source: own elaboration
The evolution of the TGD: 1975-2016

- 1950s-1970s: Spanish economy strong protectionism; industry maturing.
- 1970s-1990s. Entry in the EU. Value-added shift to wholesaling and design. Apparel outsourcing to lower labor-costs countries.
- 1990s-2010s. Chinese investment in wholesaling firm in TGD. Lack of firm’s renovation, a Catalan manufacturing base and garment-related institutions. Multinationals competition.

The shape of the new Trafalgar Garment District (2016)

- Scarce presence of garment activities.
- The fade of the Catalanian garment industry: empty premises and office spaces devoted to garment in the TGD.
- Coworkings, knowledge-based, neoartisanal and tourism-based activities. Consumer industries (i.e. art galleries and restaurants).

Factors in the emergence and evolution of the TGD’s garment specialization

The TGD as the garment neuralgic economic area of the Catalanian industry.

- Expansion of the *industrial atmosphere* due to an enlargement of the city. Urbanization – Industrialization.
- External economies:
  - Urbanization economies: transport infrastructures and business services (CBD). Old city.
  - Localization economies: proximity to garment-based firms.

TGD’s garment cluster evolution

Functional lock-in:

- Inexistence of local manufacturing-based firms and suppliers in the TGD.
- Steadily inexistence of national and regional SME’s retail purchasers due to the competition of retail multinationals.

Lost of a local garment-based network
Factors in the emergence and evolution of the TGD’s garment specialization

The TGD as the garment neuralgic economic area of the Catalanian industry.

- Expansion of the *industrial atmosphere* due to an enlargement of the city. Urbanization – Industrialization.
- External economies:
  - Urbanization economies: transport infrastructures and business services (CBD). Old city.
  - Localization economies: proximity to garment-based firms.

**TGD’s garment cluster evolution**

Cognitive lock-in:

- SME’s familiar businesses. Low budget to innovation, design and R&D.
- Not familiar continuity in wholesaling firms.
- Aim of TGD’s wholesaling association (Es-Moda) did not focus on commercial issues, but on to hamper Chinese entrance in the TGD.
Factors in the emergence and evolution of the TGD’s garment specialization

The TGD as the garment neuralgic economic area of the Catalanian industry.

- Expansion of the *industrial atmosphere* due to an enlargement of the city. Urbanization – Industrialization.
- External economies:
  - Urbanization economies: transport infrastructures and business services (CBD). Old city.
  - Localization economies: proximity to garment-based firms.

**TGD’s garment cluster evolution**

Political lock-in:

- Powerful Catalanian garment-related institutions focused on the economic situation of the textile industry but not in supporting the TGD as an urban economic space.

- Inexistence of TGD’s garment institutions that encompass the whole value chain as a lobby to pressure local government.

- Insufficient landlords not subject to market prices dynamics. Absence of a TGD’s protection urban zone.
Concluding remarks

- The relation between garment industry lock-ins at regional level to the garment specialization’s evolution of the TGD.

- The role of the Barcelona’s economic turn to knowledge-based city (22@Barcelona) and the economic transformation of the TGD.
Thank you so much for your attention and I will appreciate your questions and comments
