Research Project Pipeline

1. **Project Proposal**
   - Fill out the project proposal template
   - Make sure that a proper IRB covers the proposed research project and its personnel

2. **Project Approval**
   - Get the project approved

3. **Database Query**
   - Discuss exclusion and inclusion criteria, and desired format of result dataset
   - Ask for all details in advance and keep the reference numbers if provided

4. **Result Set Validation**
   - Validate the result data set and keep track of it via the Validation Form

5. **Finalizing Data Set For Analysis**
   - Register finalized dataset in the database for future reference and analysis

---

**Notes:**
- Ensure all necessary approvals and permissions are in place.
- Maintain thorough records and documentation throughout the process.
- Collaboration and communication are key for successful project outcomes.
