

**Correction to Enos, Ryan D. 2014. "Causal Effect of Intergroup Contact on Exclusionary Attitudes,"**  
*Proceedings of the National Academy of Sciences of the United States of America* 111(10):3699–3704.

Ryan D. Enos, December 11, 2018.

On the survey administered to subjects, there were three questions about immigration policy. These are correctly listed on page 3701 as:

- i) "Do you think the number of immigrants from Mexico who are permitted to come to the United State to live should be increased, left the same, or decreased?"
- ii) "Would you favor allowing persons that have immigrated to the United States illegally to remain in the country if they are employed and have no criminal history?"
- iii) "Some people favor a state law declaring English as the Official Language. Some other people oppose such a law. Would you favor such a law?"

In Table 1 on page 3701 and Figure 2 on page 3702, question ii is mistakenly recorded as "Children of undocumented be allowed to stay?" The actual question asked of subjects is correctly listed as the question in the text on page 3701.

I wrote to PNAS on December 6, 2018 to inform them about this error. They wrote back on December 7 with:

*Thank you for letting us know about this. For errors of scientific content, PNAS publishes Corrections only if the error would substantially impact the results or conclusions, or if an informed would be hindered from understanding the text or reproducing the results. While the error is unfortunate and a Correction would address the matter, the fact that the correct question is included in the text, just not in Table 1 or Fig. 2, means a reader should be able to infer the correct meaning, and would not be significantly misled by the error. As such, the error does not require publication of a Correction. Should any readers contact us about the error, we will direct them to contact you via the email address on the first page.*
