

Foundations of International Macroeconomics

by Maurice Obstfeld and Kenneth Rogoff

Contents

- Preface
- Introduction

1 Intertemporal Trade and the Current Account Balance

- 1.1 A Small Two-Period Endowment Economy Application: Consumption Smoothing in the Second Millennium B.C.
- 1.2 The Role of Investment
 - Box 1.1 Nominal versus Real Current Accounts
- 1.3 A Two-Region World Economy
 - Application: War and the Current Account
 - Application: Investment Productivity and World Real Interest Rates in the 1980s
- 1.4 Taxation of Foreign Borrowing and Lending
- 1.5 International Labor Movements
 - Application: Energy Prices, Global Saving, and Real Interest Rates

1A Stability and the Marshall-Lerner Condition

Exercises

2 Dynamics of Small Open Economies

- 2.1 A Small Economy with Many Periods
 - Application: When Is a Country Bankrupt?
- 2.2 Dynamics of the Current Account
 - Box 2.1 Japan's 1923 Earthquake
- 2.3 A Stochastic Current Account Model
 - Application: Deaton's Paradox
 - Application: The Relative Impact of Productivity Shocks on Investment and the Current Account
- 2.4 Consumer Durables and the Current Account
- 2.5 Firms, the Labor Market and Investment

2A Trend Productivity Growth, Saving, and Investment: A Detailed Example

- 2B Speculative Asset Price Bubbles, Ponzi Games, and Transversality Conditions
- Exercises

3 The Life Cycle, Tax Policy, and the Current Account

- 3.1 Government Budget Policy in the Absence of Overlapping Generations
- 3.2 Government Budget Deficits in an Overlapping Generations Model
 - Box 3.1 Generational Accounting
 - Application: Do Government Budget Deficits Cause Current Account Deficits?
- Application: Overlapping Generations and Econometric Tests of the Euler Equation
- 3.3 Output Fluctuations, Demographics, and the Life Cycle Application: How Are Saving and Growth Related?
- 3.4 Investment and Growth
 - Application: Feldstein and Horioka's Saving-Investment Puzzle
- 3.5 Aggregate and Intergenerational Gains from Trade
- 3.6 Public Debt and the World Interest Rate
 - Application: Government Debt and World Interest Rates Since 1970
- 3.7 Integrating the Overlapping Generations and Representative-Consumer Models

3A Dynamic Inefficiency

4 The Real Exchange Rate and the Terms of Trade

- 4.1 International Price Levels and the Real Exchange Rate
- 4.2 The Price of Nontraded Goods with Mobile Capital
 - Box 4.1 Empirical Evidence on the Law of One Price
 - Application: Sectoral Productivity Differentials and the Relative Prices of Nontradables in Industrial Countries
 - Application: Productivity Growth and Real Exchange Rates
- 4.3 Consumption and Production in the Long Run
- 4.4 Consumption Dynamics, the Price Level, and the Real Interest Rate
- 4.5 The Terms of Trade in a Dynamic Ricardian Model
 - Box 4.2 The Transfer Effect for Industrial Countries

4A Endogenous Labor Supply, Revisited

4B Costly Capital Mobility and Short-Run Relative Price Adjustment

5 Uncertainty and International Financial Markets

- 5.1 Trade across Random States of Nature: The Small-Country Case
 - Box 5.1 Lloyd's of London and the Custom Market for Risks
- 5.2 A Global Model
 - Application: Comparing International Consumption and Output Correlations
 - Box 5.2 Are Markets More Complete within than Among Countries?
- 5.3 International Portfolio Diversification
 - Application: International Portfolio Diversification and the Home Bias Puzzle
- 5.4 Asset Pricing
 - Application: The Equity Premium Puzzle over the Very Long Run
 - Application: GDP-Linked Securities and Estimates of VM
- 5.5 The Role of Nontradables
 - Application: Nontradability and International Consumption Correlations
 - Application: How Large Are the Gains from International Risk Sharing?
- 5.6 A Model of Intragenerational Risk Sharing
 - Box 5.3 A Test of Complete Markets Based on Consumption Divergence within Age Cohorts

5A Spanning and Completeness

5B Comparative Advantage, the Current Account, and Gross Asset Purchases: A Simple Example

5C An Infinite-Horizon Complete-Markets Model

5D Ongoing Securities Trade and Dynamic Consistency

6 Imperfections in International Capital Markets

- 6.1 Sovereign Risk
 - Box 6.1 Sovereign Immunity and Creditor Sanctions
 - Application: How Costly Is Exclusion from World Insurance Markets?
 - Application: How Have Prior Defaults Affected Countries Borrowing Terms?
- 6.2 Sovereign Risk and Investment
 - Application: Debt Buybacks in Practice
- 6.3 Risk Sharing with Hidden Information
- 6.4 Moral Hazard in International Lending
 - Application: Financing Constraints and Investment

6A Recontracting Sovereign Debt Repayments

6B Risk Sharing with Default Risk and Saving

7 Global Linkages and Economic Growth

- 7.1 The Neoclassical Growth Model
 - Box 7.1 Capital-Output Ratios since World War II
- 7.2 International Convergence
 - Application: Productivity Convergence, 1870-1979: The Baumol-DeLong-Romer Debate
 - Application: Public Capital Accumulation and Convergence
- 7.3 Endogenous Growth
 - Application: Can Capital Deepening Be an Engine of Sustained
- High Growth Rates: Evidence from Fast-Growing East Asia
 - Application: Population Size and Growth
- 7.4 Stochastic Neoclassical Growth Models

7A Continuous-Time Growth Models as Limits of Discrete-Time Models

- 7B A Simple Stochastic Overlapping Generations Model with Two-Period Lives
- Exercises

8 Money and Exchange Rates under Flexible Prices

- 8.1 Assumptions on the Nature of Money
- 8.2 The Cagan Model of Money and Prices
 - Box 8.1 How Important Is Seignorage?
- 8.3 Monetary Exchange Rate Models with Maximizing Individuals
 - Application: Testing for Speculative Bubbles
- 8.4 Nominal Exchange Rate Regimes
 - Box 8.2 Growing Use of the Dollar Abroad
- 8.5 Target Zones for Exchange Rates
- 8.6 Speculative Attacks on a Target Zone
- 8.7 A Stochastic Global General Equilibrium Model with Nominal Assets

8A A Two-Country Cash-in-Advance Model

8B The Mechanics of Foreign-Exchange Intervention

9 Nominal Price Rigidities: Empirical Facts and Basic Open-Economy Models

- 9.1 Sticky Domestic Goods Prices and Exchange Rates
- 9.2 The Mundell-Fleming-Dornbusch Model
- 9.3 Empirical Evidence on Sticky-Price Exchange-Rate Models
- 9.4 Choice of the Exchange-Rate Regime
- 9.5 Models of Credibility in Monetary Policy
 - Application: Central Bank Independence and Inflation
 - Application: Openness and Inflation

10 Sticky-Price Models of Output, the Exchange Rate, and the Current Account

- 10.1 A Two-Country General Equilibrium Model of International Monetary Policy Transmission
 - Box 10.1 More Empirical Evidence on Sticky Prices
 - Box 10.2 The Role of Imperfect Competition in Business Cycles
- 10.2 Imperfect Competition and Preset Prices for Nontradables: Overshooting Revisited
 - Application: Wealth Effects and the Real Exchange Rate
- 10.3 Government Spending and Productivity Shocks
- 10.4 Nominal Wage Rigidities
 - Application: Pricing to Market and Exchange-Rate Pass-Through

Supplements to Chapter 2

A Methods of Intertemporal Optimization

B A Model with Intertemporally Nonadditive Preferences

C Solving Systems of Linear Difference Equations

Supplement to Chapter 5

- A Multiperiod Portfolio Selection

Supplement to Chapter 8

- A Continuous-Time Maximization and the Maximum Principle
