"Linking Scientific Data, Publications, and Communities"

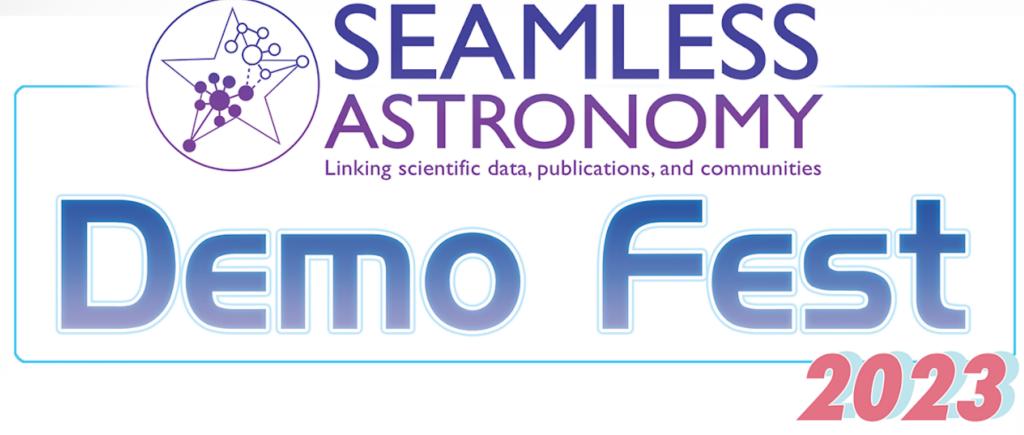

Linking scientific data, publications, and communities

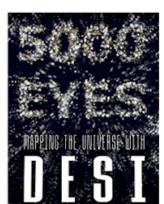

Seamless Astronomy at the <u>Harvard & Smithsonian Center for Astrophysics</u> brings together astronomers, computer scientists, information scientists, librarians and visualization experts involved in developing tools and systems to study and enable the next generation of **online astronomical research**.

Current projects include research on the development of systems that seamlessly integrate scientific data and literature, the semantic interlinking and annotation of scientific resources, the study of the impact of social media and networking sites on scientific dissemination, and the analysis and visualization of astronomical data and research communities.

Joining me: Dr. **Eric Koch**Director of Seamless Astronomy at the CfA + expert glue/CosmicDS/WWT dev, Dr. Jon **Carifio**

Join us for snacks and see experts in data visualization, research, education, software, and more present their amazing projects!

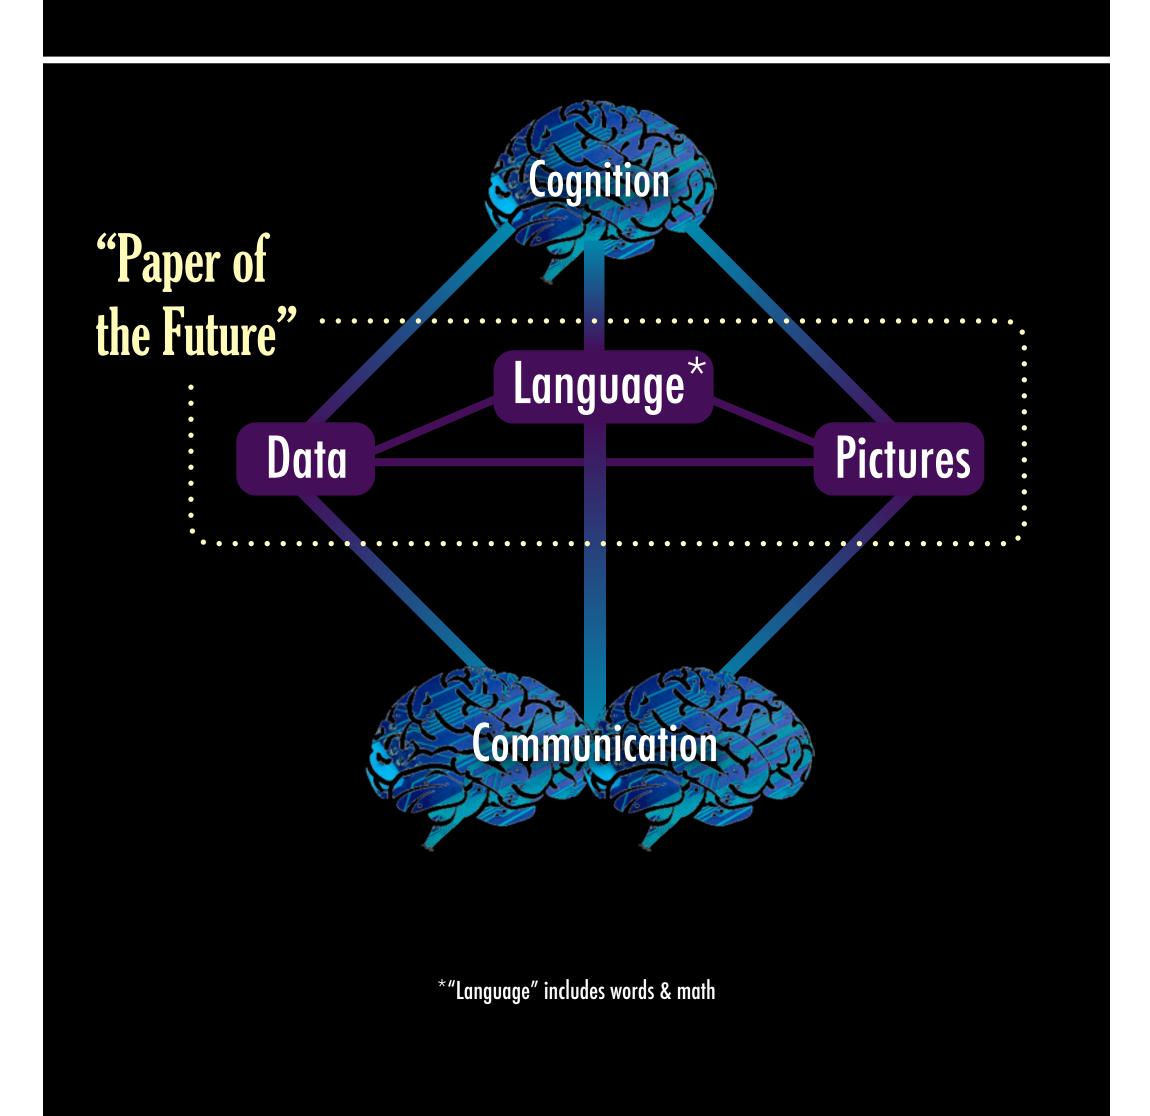

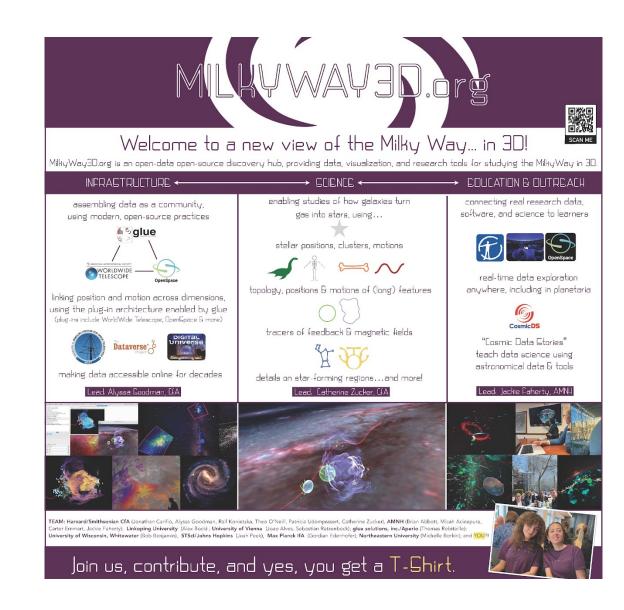

...and more!

Josh Peek,
Catherine Zucker,
Jackie Faherty are
here at AAS today.
Fernando Perez is
here in spirit, as are
many other
collaborators!

Bialy et al. (2021) presented 2D and 3D observations of the Perseus and Taurus star-forming region, showing that the 3D ISM structure reveals the existence of a very extended shell, R~80 pc, where the Perseus and Taurus molecular clouds lie on the two ends of the shell. This shell was named "the Per-Tau Shell", and it was argued that it may have been produced by a past supernova (SN) and stellar feedback activity, pointing to the potential importance of positive SN feedback.

This database includes the data required to reproduce these results, and further study this region in 2D and 3D. It

The Modular, Personalizable, Approach we "Can", "Could" (& Should!!) Take to Interactions

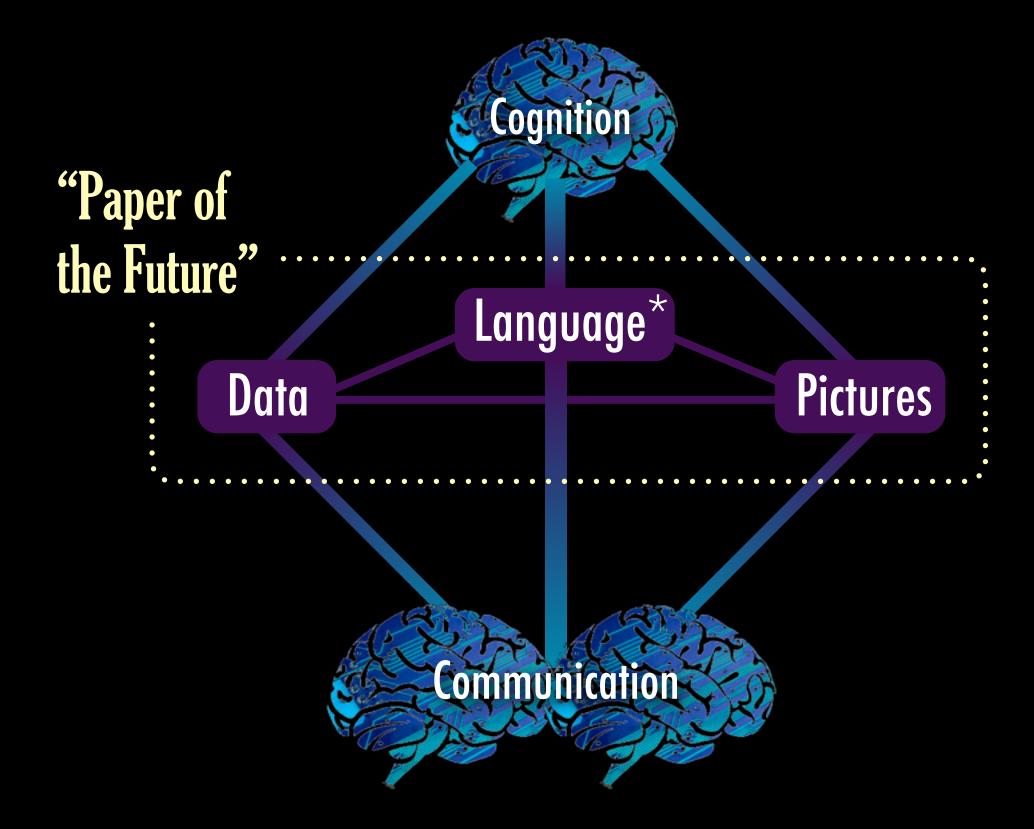

"Customizable Complexity"

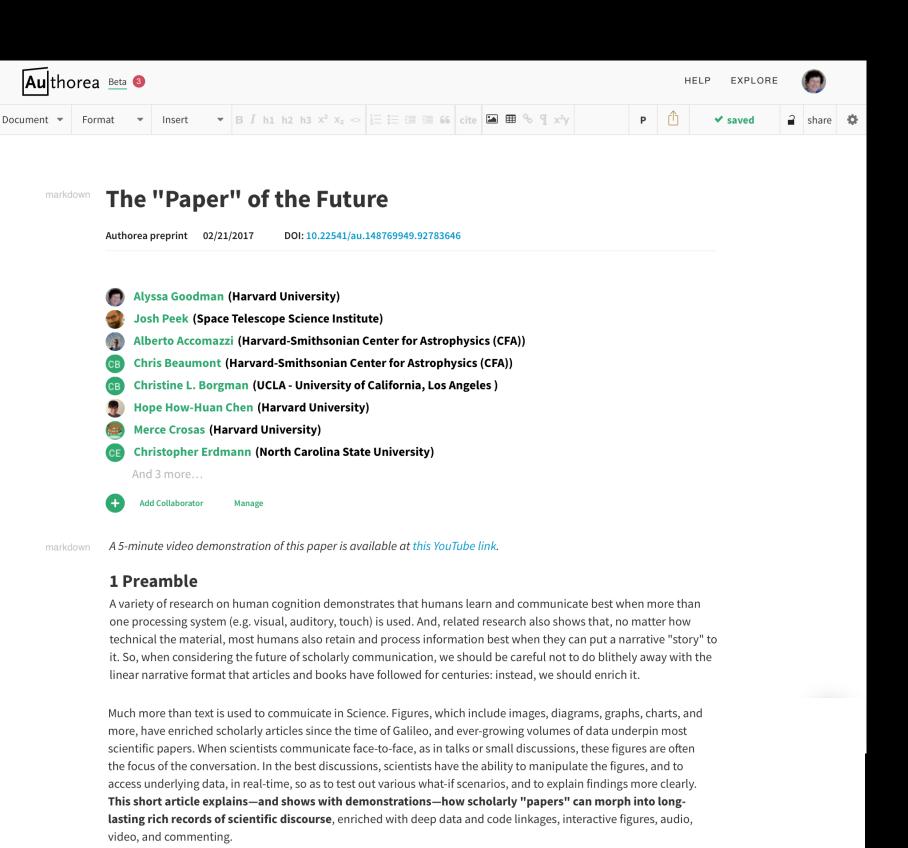

2015

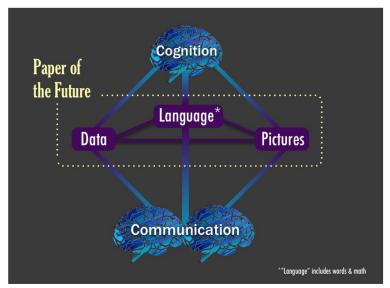

Fig. 1

The Paper of the Future should include seamless linkages amongst data, pictures, and language, where "language" includes both words and math. When an individual attempts to understand each of these kinds of information, different cognitive functions are utilized: communication is inefficient if the channel is restricted primarily to language, without easy interconnection to data and pictures.

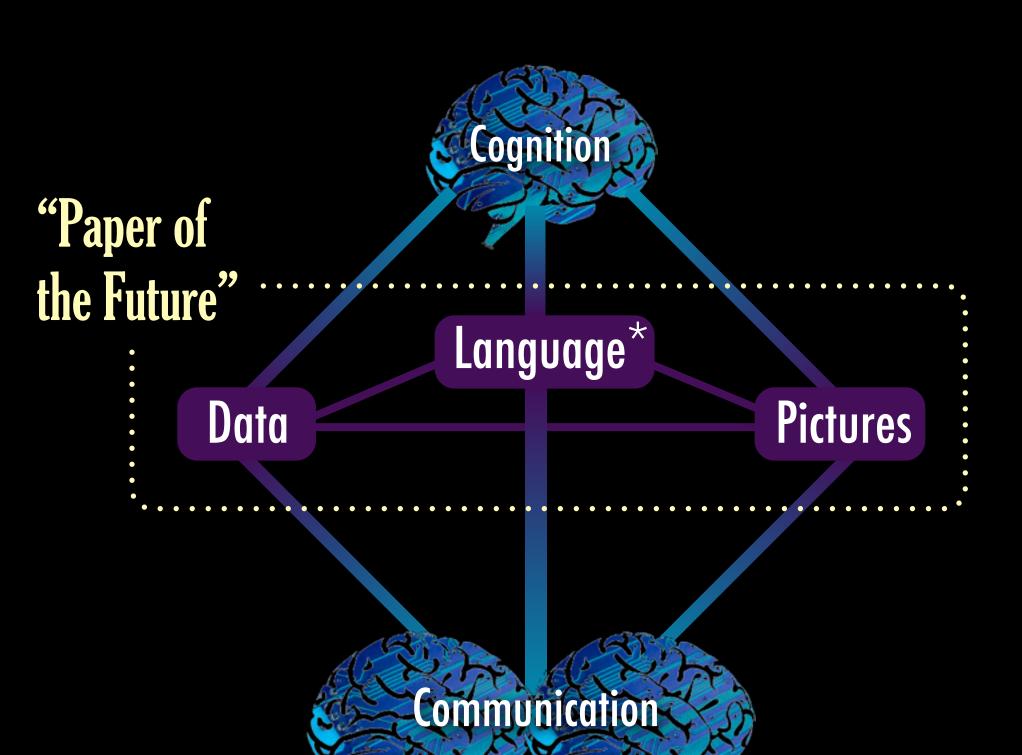

^{*&}quot;Language" includes words & math

Why use LIVE?

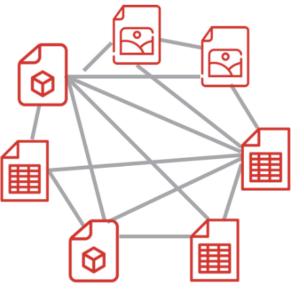

LIVE Astro

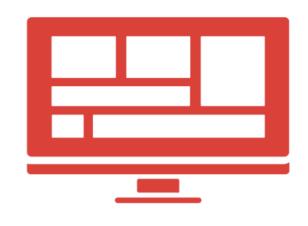

data from anywhere, in any format

"glupyter" is a union of glue and Jupyter software environments. We think it may well be the future of glue, or "glue-qt" as experts sometimes call the desktop app version of glue. This webpage, hosted openly and freely by glue solutions, inc., serves as a clearinghouse for current information about open-source glupyter-related projects. Some of these projects are funded by government agencies (notably NSF and NASA), others by private foundations (e.g. The Gordon and Betty Moore Foundation), some as part of corporate collaborations (e.g. Harvard+Google Data+Climate), and some by open-source consulting work carried out by glue solutions, inc.

fully flexible, scriptable, extensible.

"simple"

... at Cape Code 2023 (with Maarten Breddels et al.)

"flavors" of glue

"glupyter" means glue running in any flavor of Jupyter, EITHER locally or on the web.

"glue" eventually means glue running anywhere (including in a browser), now it means glue in Qt either locally or on the web

Principal GitHub Repositories (glue-viz)

_"glue" -- github.com/glue-viz/glue

-Tom Robitaille is separating glue-core from glue-qt (this repo name will go away)

"glue-core" -- github.com/glue-viz/glue

The core (frontend-agnostic) glue functionality

"glue-Qt" -- github.com/glue-viz/glue-qt
Qt front-ends to glue-core (desktop client)

→glue-Jupyter -- github.com/glue-viz/glue-jupyter

Jupyter front-ends (notebook & lab) to glue-core (aka "glupyter")

"glue-jupyter.lab_app" -- github.com/QuantStack/glue-jupyterlab -prototype QT-glue-like experience inside of JupyterLab, this will become a sub-package of glue-jupyter

GitHub Repositories (Special Purpose Apps using glue-jupyter))

"CosmicDS" -- github.com/cosmicds/cosmicds

Interactive online educational software which uses glue to teach
learners about data science and astronomy

"Jdaviz" -- <u>github.com/spacetelescope/jdaviz</u> special-purpose tools for astronomy -- quick insights for images and spectra (**SEPARATE** REPO)

GitHub Repositories (glue plug-ins)

glue-vispy-viewers - github.com/glue-viz/glue-vispy-viewers
3D viewers for glue powered by vispy

glue-wwt - github.com/glue-viz/glue-wwt
Use WWT as a viewer in glue (Qt and Jupyter)

glue-plotly -github.com/glue-viz/glue-plotly export to plot.ly as html

glue-geospatial -- github.com/glue-viz/glue-geospatial GIS tools in glue

map viewer for glue using ipyleaflet (Jupyter only)

"SAVE" - github.com/jfoster17/SAVE

glue-map-- github.com/jfoster17/glue-map

GIS-style environment useful especially for climate and climate change mitigation data

glue-astronomy -- github.com/glue-viz/glue-astronomy collection of additional plug-ins making glue most useful to astronomy

glue-genes -- github.com/gluesolutions/glue-genes glue tailored for genomics--currently Qt-only, future versions will offer Jupyter/web versions

glue-solar -- github.com/glue-viz/glue-solar glue for Solar physics (experimental)

glue-medical -- glue for medical imaging (experimental)

Imagine an MSWD-style "templates" paradigm

glue (Qt), new session = "Blank Document"

glue (Qt), existing session = Existing Document

glue genes (Qt), with custom plug-ins = Blank Document, with user plug-ins

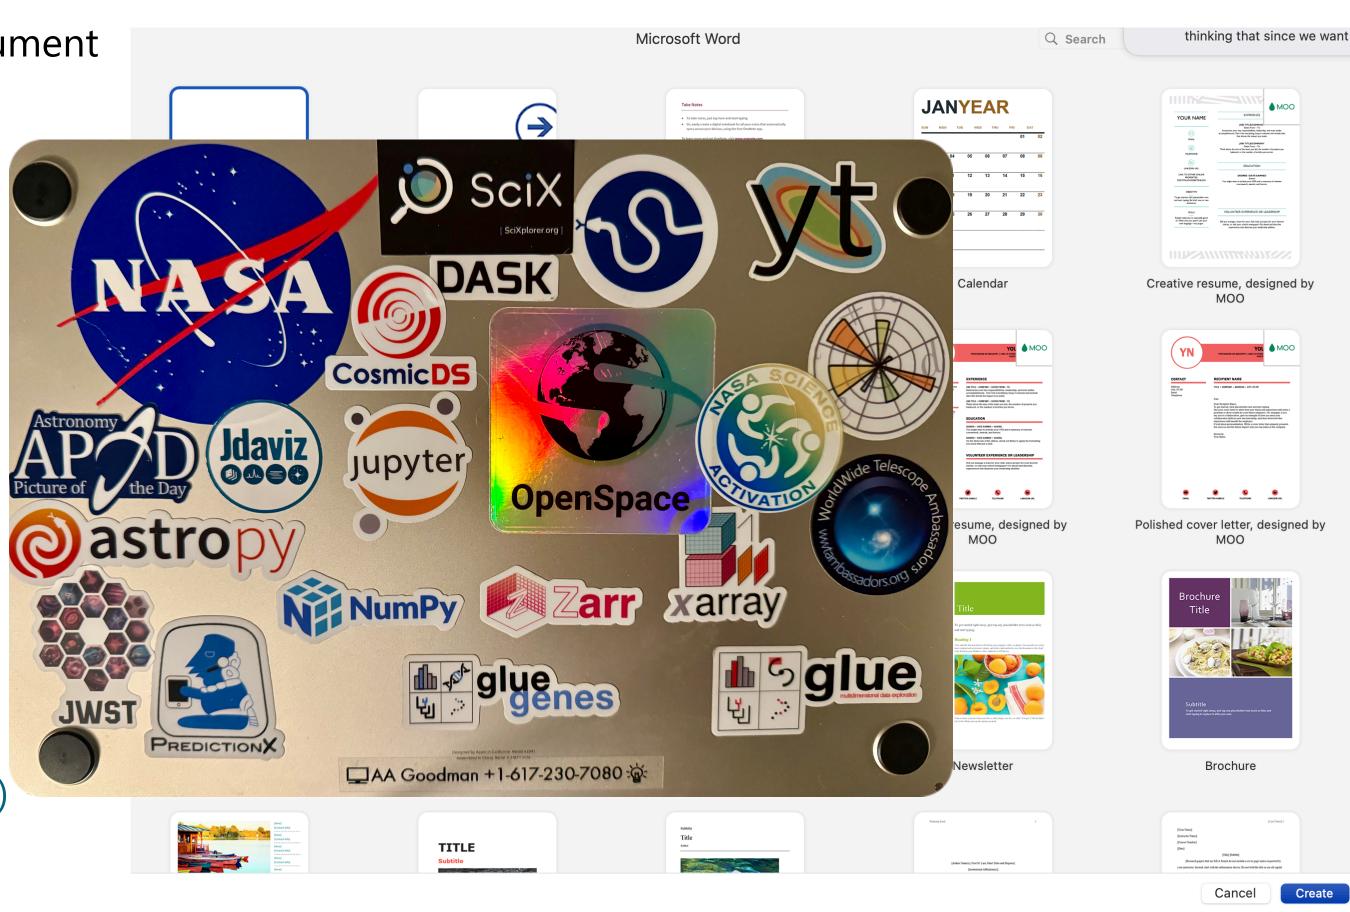

glupyter Imviz = Imviz Template
glupyter MOSviz = Mosviz Template
glupyter Specviz = Specviz Template
glupyter Cubeviz = Cubeviz Template

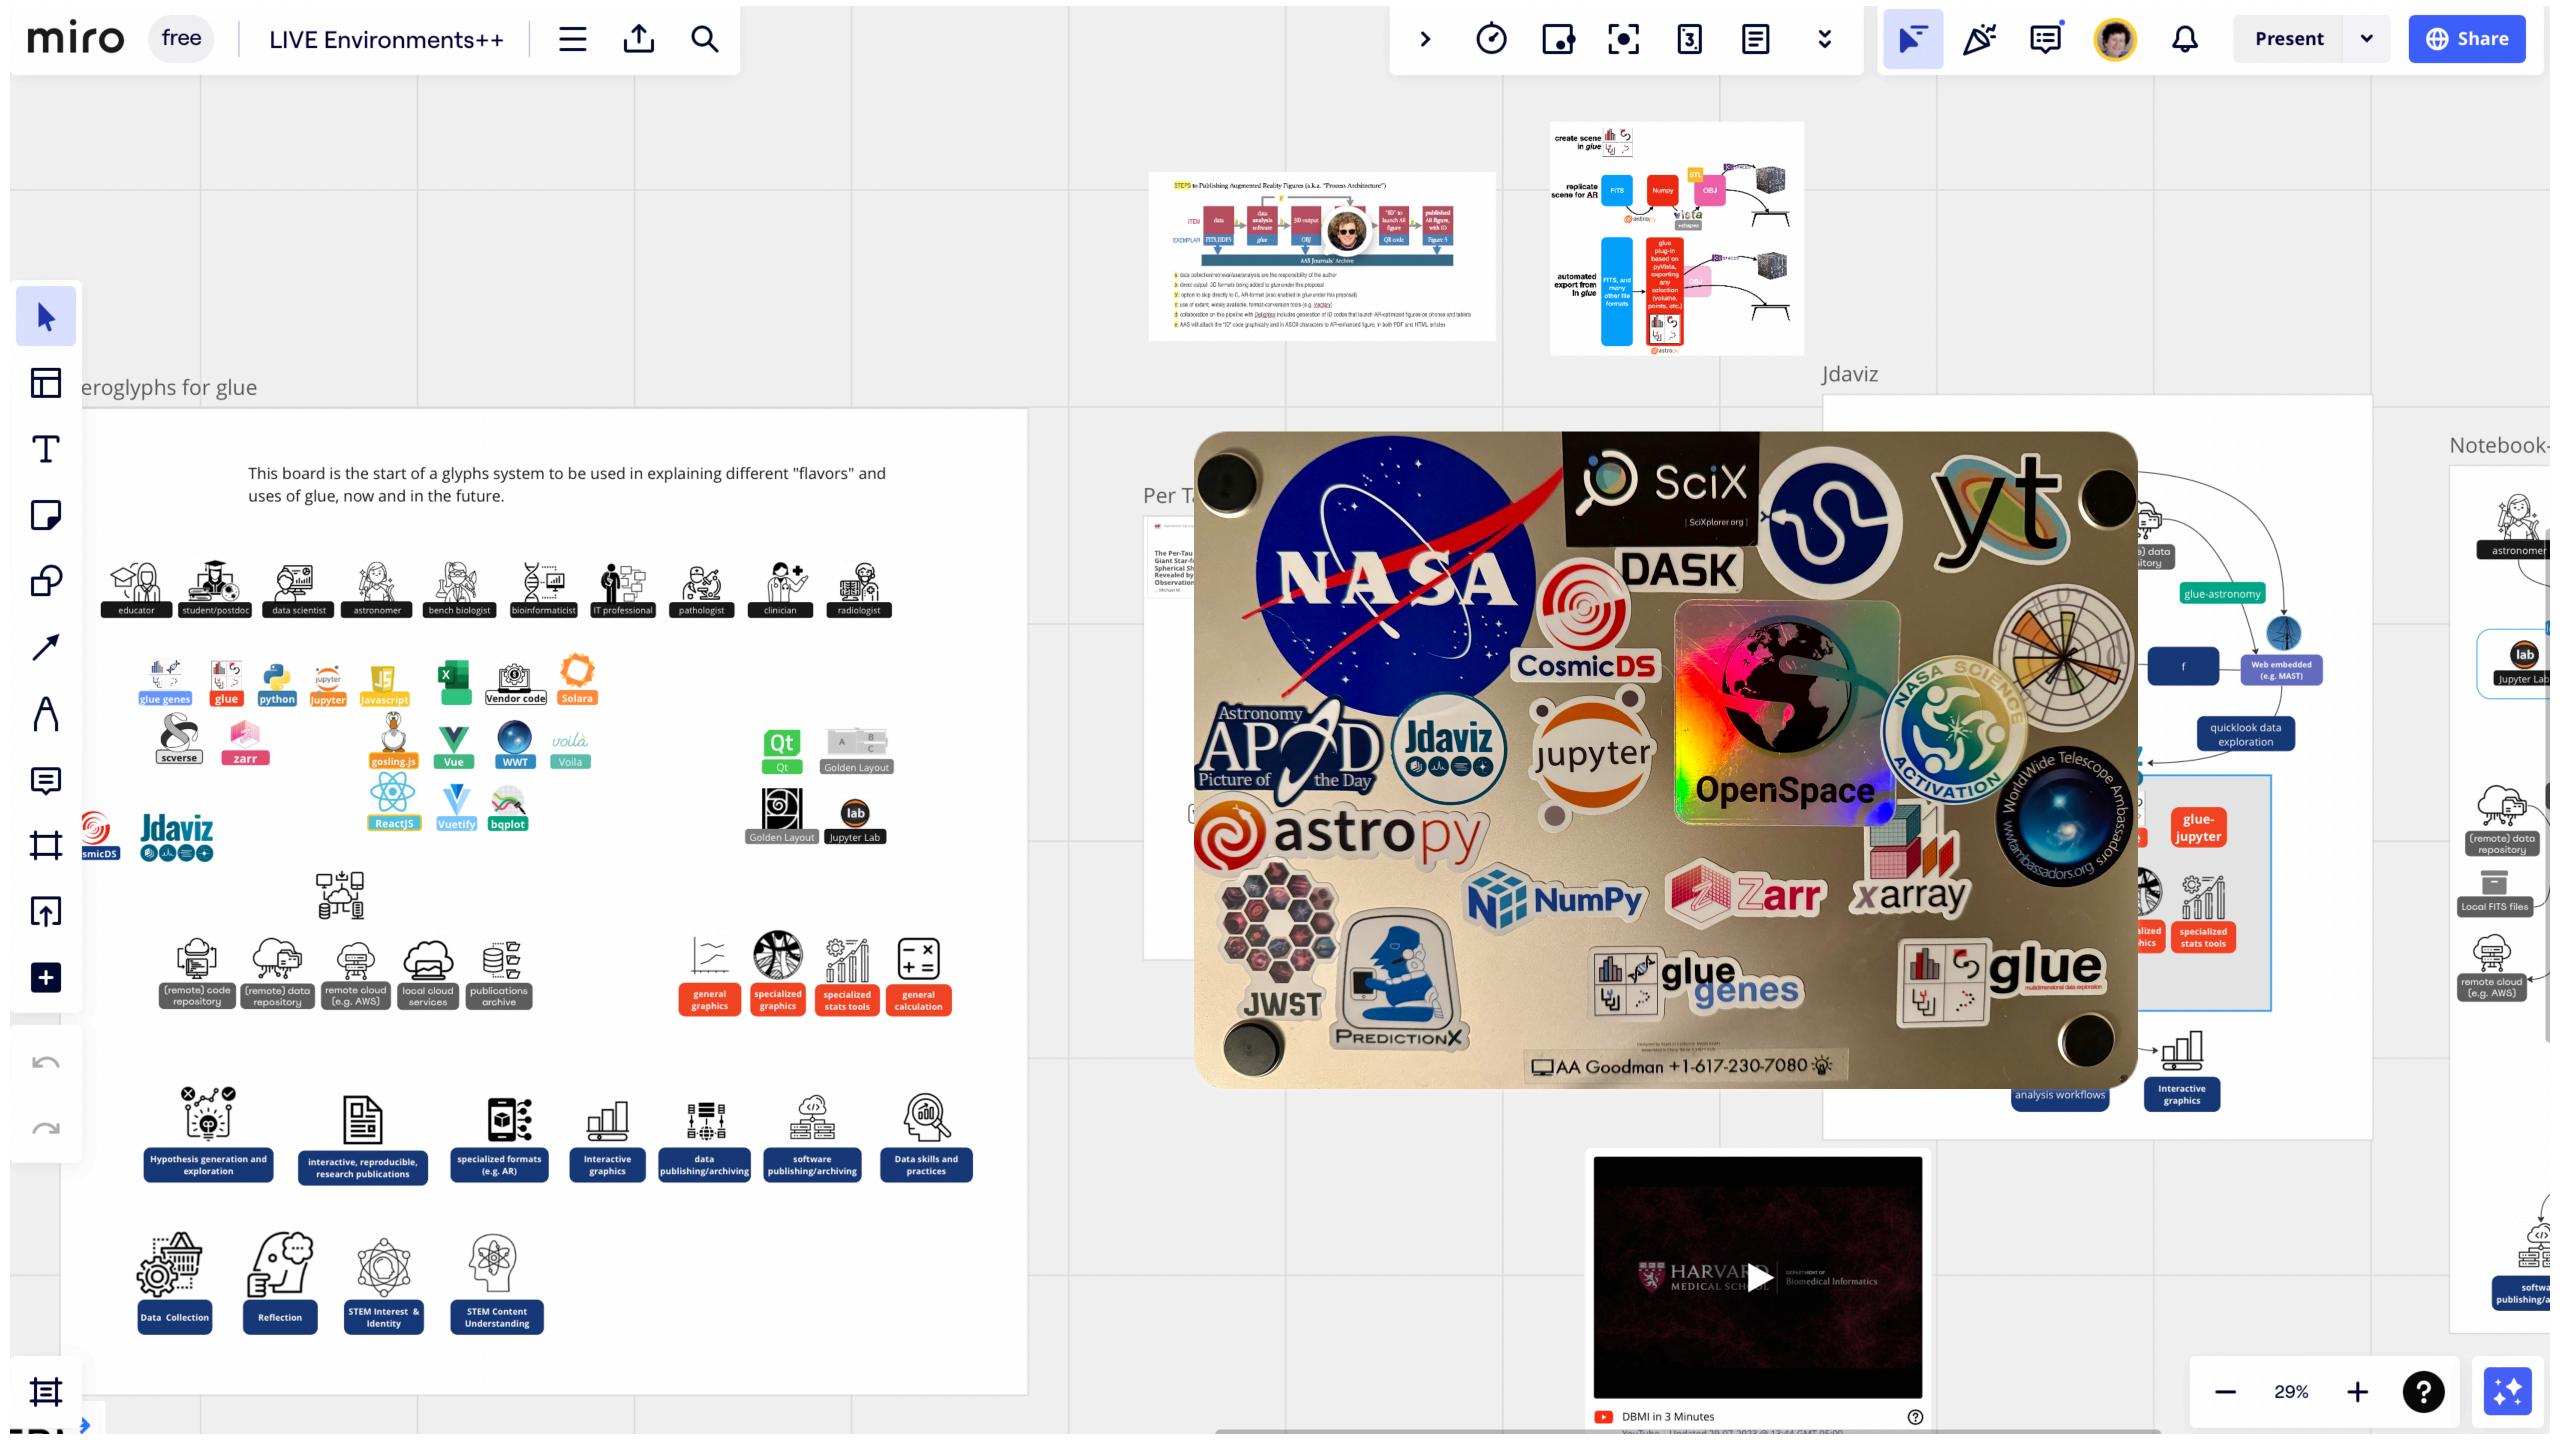

Cosmic Data Story = CosmicDS Template (site)

Data+Climate (GIS-featured) site = GIS Story Template (site)

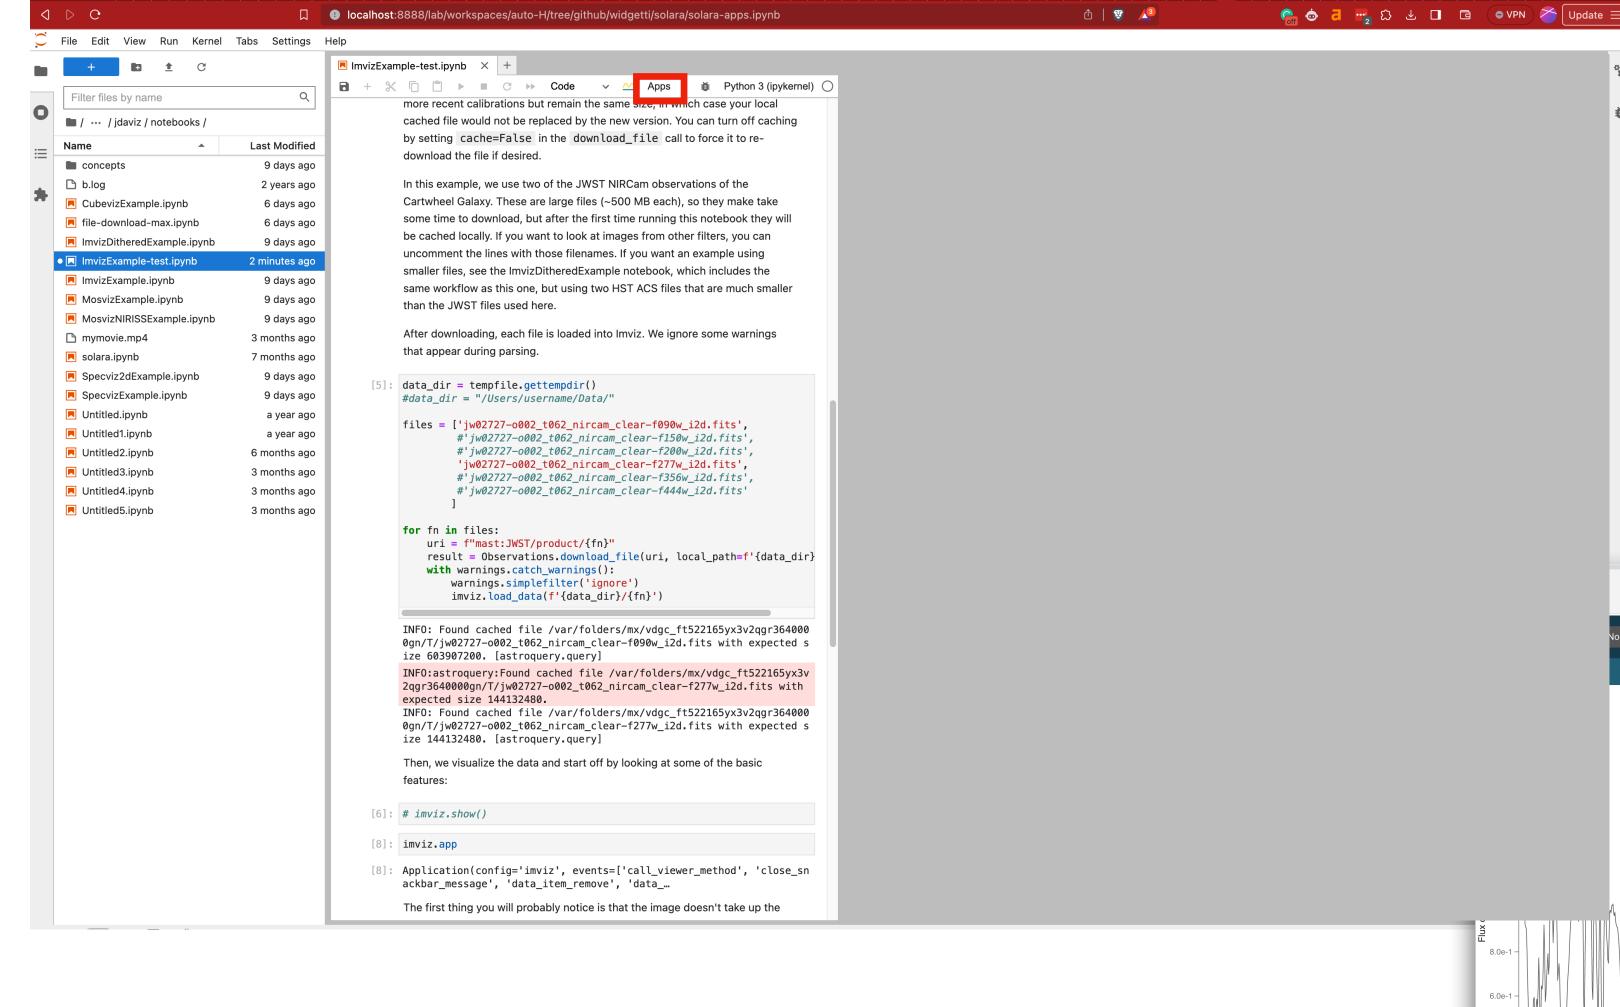

And other special-purpose uses can rely on new "templates," fuilt from scratch or by combining existing templates.

Imagine Jupyter apps'

(built using Solara, which has already been tested re:Imviz & is planning stages re:CosmicDS HubbleDS)

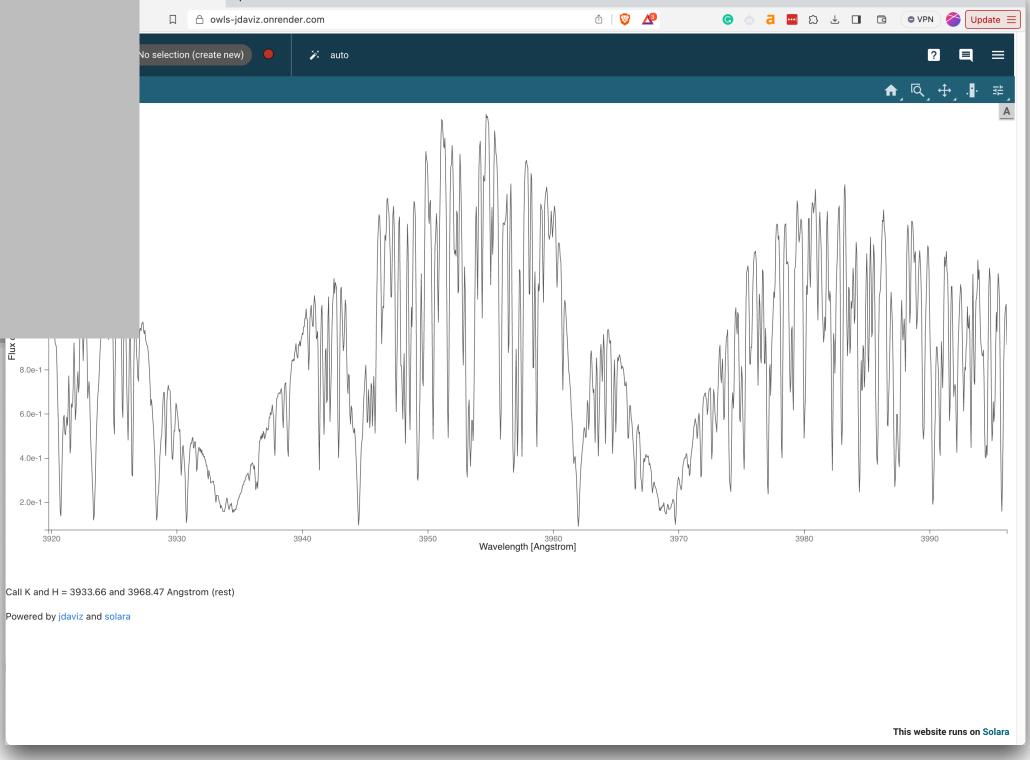

Jupyter apps can be started from the notebook

Side by side (ala Sidecar)

Can be shown in a separate browser tab

<u>Interactive Research Figures in the Browser</u>

LIVE Astro for the Public

MilkyWay3D in a Planetarium

Cosmic Data Stories

Examples beyond glue, OpenSpace and WWT

Interactive Research Figures in the Browser

Excerpt, not Export: Rich Interactive presentations and publications

Given glue's astronomical capabilities, many interactive figures used both in **research** and **communication** have been produced by exporting data sets that have been linked, explored, and visualized n the downloadable desktop (Qt) version of glue to Plotly (semi-automatically).

One of the goals of LIVE Astro is to unify the data exploration environment (e.g. glue in the browser as glupyter) with the presentation/publication environment, avoiding the need for export. So, in the fully-realized LIVE Astro environment, interactive figures could be a *direct excerpt*, rather than an export, from a researcher's work.

SPECIAL NOTICE FOR AAS 224 ATTENDEES IN NEW ORLEANS

The LIVE Astro talk Google Slideshow here was delivered by Jackie Faherty at the AAS Visualization Workshop on 1/7/24 in New Orleans, on behalf of Alyssa Goodman (who was stranded by Delta Airlines that day!). If you've reached this site on 1/7 itself, please note that it's so new that it's only "almost" ready for priimetime, so "pardon our dust" on unfinished sections!

LIVE Astro

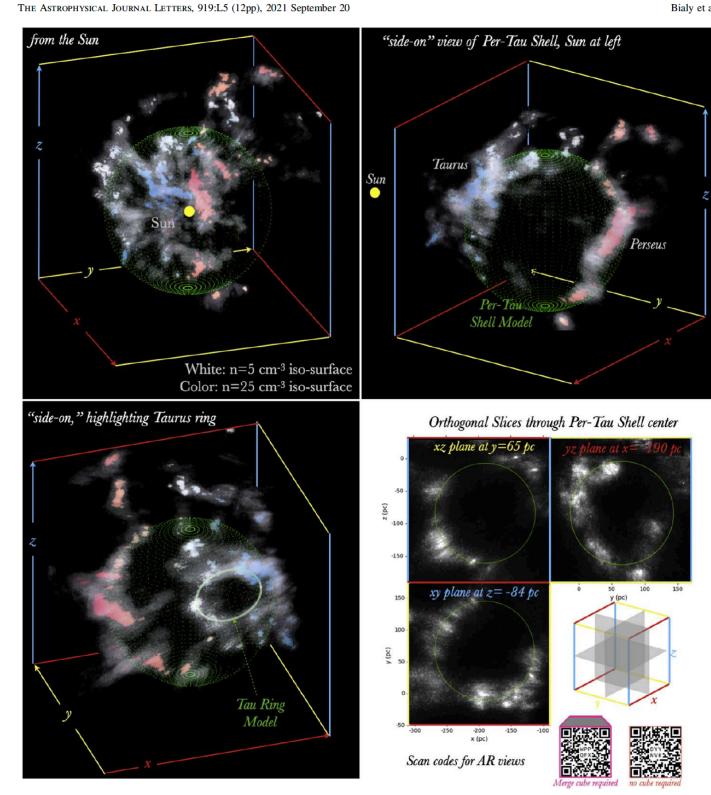

Linkable Interactive Visualization **Exploration Environments for** Astronomy (part of the LIVE suite)

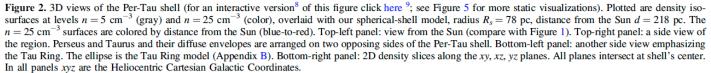

This talk (& website) will be presented by Jackie Faherty, who is collaborating with Alyssa **Goodman** and Catherine **Zucker** to lead "MilkyWay3D.org," the key demonstration project for LIVE Astro, which is itself part of the LIVE Environments effort, which includes ↓ LIVE Bio, and ♠ LIVE GIS.

MilkyWay3D.org is the demonstrator project for LIVE Astro

You

explain why designing an integrated visualization system using modular elements is so much easier today than it was 15 years ago

Al agrees it's time!

ChatGPT

Designing an integrated visualization system using modular elements has become significantly easier today compared to 15 years ago due to several key developments:

- 1. Advancements in Technology: Modern computing power has dramatically increased, enabling the handling of complex visualizations and large datasets with ease. This was a significant limitation 15 years ago.
- 2. **Availability of Specialized Tools and Libraries**: Today, there is a plethora of tools and libraries specifically designed for visualization, such as D3.js, Plotly, and Matplotlib. These tools offer modular components that can be easily integrated and customized, making the process of creating complex visualizations much simpler.
- 3. Widespread Adoption of Open Standards and APIs: The growth of open standards and APIs has made it easier to integrate different software modules and services. This interoperability was much more limited in the past, making it challenging to combine elements from different sources.
- 4. Improved Software Development Practices: Modern software development practices, like Agile and DevOps, encourage modular design, continuous integration, and testing. This was not the standard approach 15 years ago, making modular development more cumbersome.
- 5. Greater Community and Support: The open-source community has grown exponentially, offering extensive resources, tutorials, and forums for troubleshooting and support. This community-driven support system was less developed 15 years ago.
- 6. Cloud Computing and Virtualization: The advent of cloud computing and virtualization has made it easier to deploy and scale visualization systems. These technologies provide flexibility and scalability that were not available or were very expensive 15 years ago.
- 7. Enhanced User Interface (UI) Frameworks: Modern UI frameworks and design languages have made it easier to create intuitive and interactive visualizations. These frameworks are often modular, allowing developers to integrate and customize components efficiently.
- 8. Data Availability and Big Data Technologies: There is now an abundance of data available for visualization, and big data technologies have made it possible to process and visualize this data in real-time, something that was much more challenging 15 years ago.

Overall, the combination of technological advancements, better tools, open standards, modern development practices, and a supportive community has made the task of designing integrated visualization systems using modular elements much more accessible and efficient today.

(but, AI is not so great at visualization, yet...)

ChatGPT 4 ~

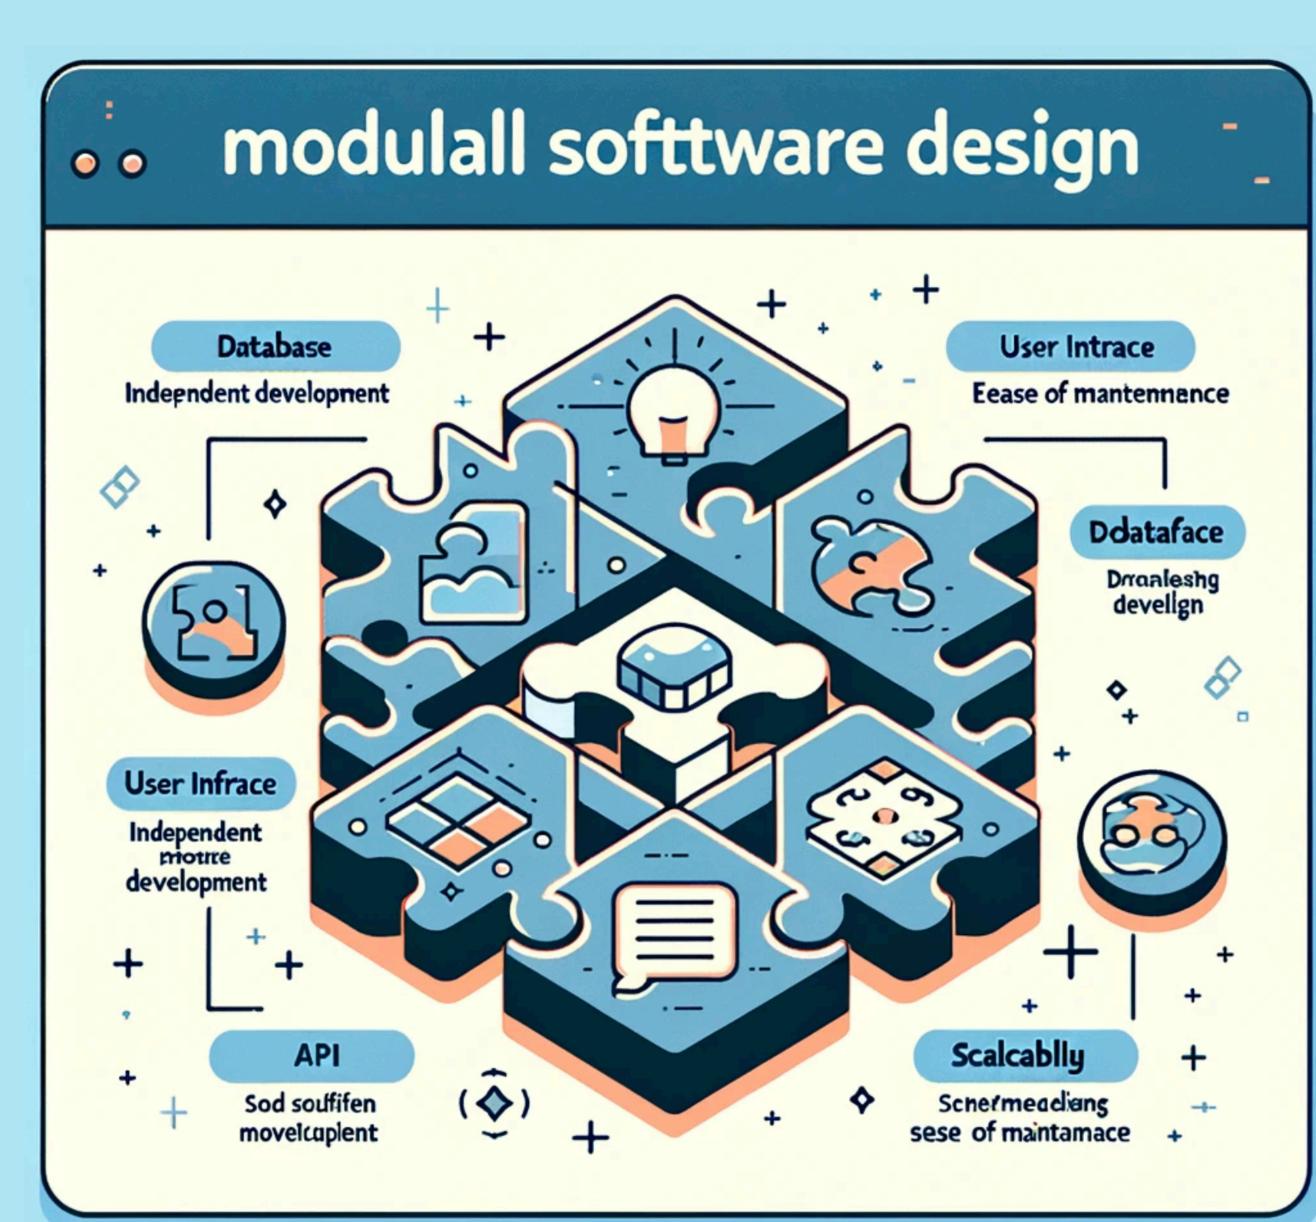

You

make 5 slides explaining how modular software elements can be fit into a Jupyter framework using composable philosophy

ChatGPT

Creating a five-slide presentation to explain how modular software elements can be integrated into a Jupyter framework using a composable philosophy involves breaking down the concept into digestible parts. Here's a suggested outline for the slides:

- Introduction to Modular Software Design: This slide can explain the basics of modular software design, emphasizing the importance of creating software in smaller, manageable pieces that can be developed, tested, and maintained independently.
- 2. **Understanding the Jupyter Framework:** This slide should introduce the Jupyter framework, highlighting its features, capabilities, and why it's a suitable platform for integrating modular software elements.
- Principles of Composability in Software: Here, the focus will be on the composable philosophy, explaining how it allows for the flexible combination of independent software modules to create more complex systems.
- 4. Integrating Modular Elements in Jupyter: This slide can delve into the practical aspects of integrating modular software elements into the Jupyter framework, possibly includ ↓ ode examples or architecture diagrams.

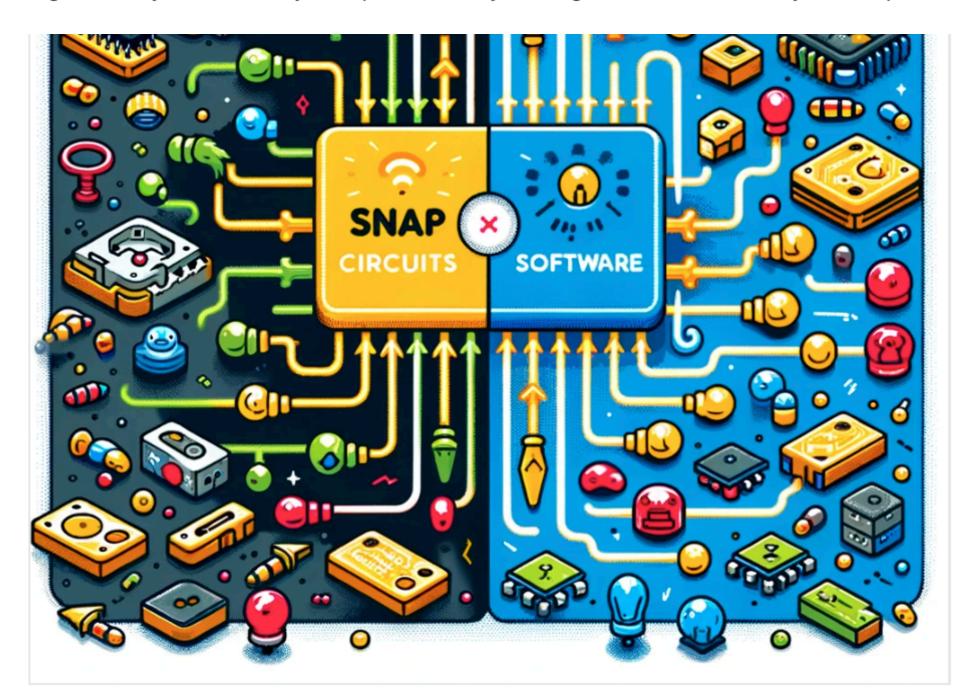

explain why designing an integrated visualization system using modular elements is so much easier today than it was 15 years ago

ChatGPT

Designing an integrated visualization system using modular elements has become significantly easier today compared to 15 years ago due to several key developments:

Here's the graphic that demonstrates the analogy between snap circuits and composable software. It visually compares the concept of snap circuits on one side to software components on the other, illustrating the modularity and interconnectivity present in both systems. This should help in understanding how these two concepts are related in terms of their modular and composable nature.
