Exploratory Data Analysis and The Future, with glue

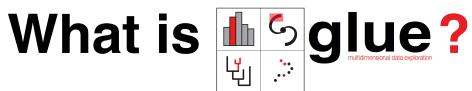

Alyssa Goodman, Center for Astrophysics | Harvard & Smithsonian

It's not an acronym.

It is open-source software that glues data, glues graphs & glues tools.

data

numbers (tables, arrays, spreadsheets)

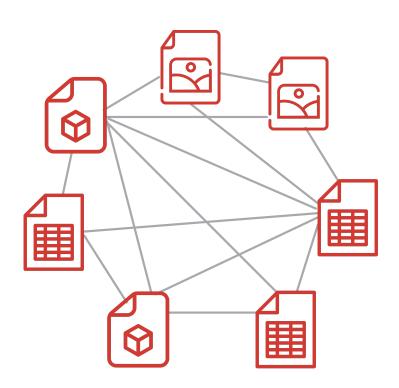

images & maps (FITS, JPEG, GIS and more)

data cubes (3D, 4D, and more)

data files' common attributes are glued

"graphs"

common statistical graphics

(scatterplots, histograms, tables, curves, overlays)

maps & images

(greyscale, color, contours, layer control...)

3D displays

(scatter plots, volumetric rendering, sliders...)

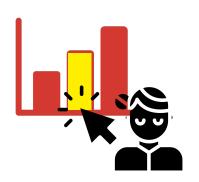

specialized & custom charts

(dendrograms, polar plots, + domain-specific options)

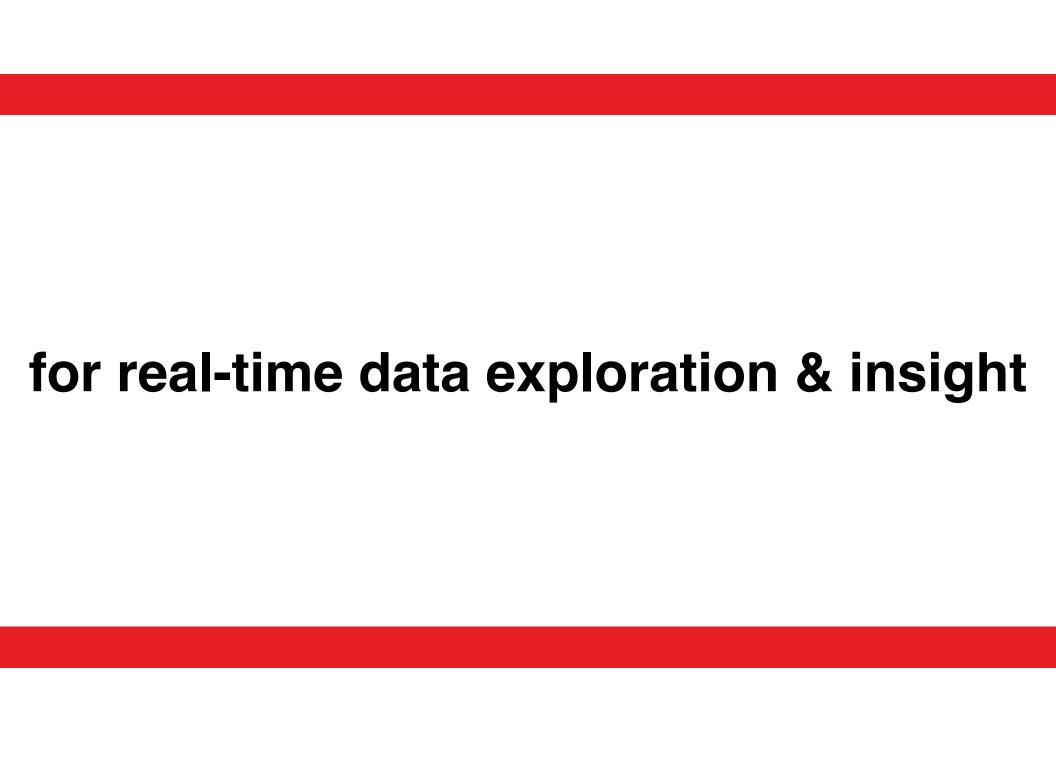

selections propagate across all graphs

tools

plug-ins (user-defined formats, plots, layouts...)

web services (across domains)

command-line (built-in terminal, scriptable)

for easy customization

glues data, glues graphs & glues tools.

glueviz.org

BONUS: save, share, or publish what you learn—

save "sessions" to continue where you left off export graphics use/export to Jupyter environments export to plot.ly (javascript) export to augmented reality

learn how at glueviz.org.

Great...but what can I do with glue, in Astronomy?

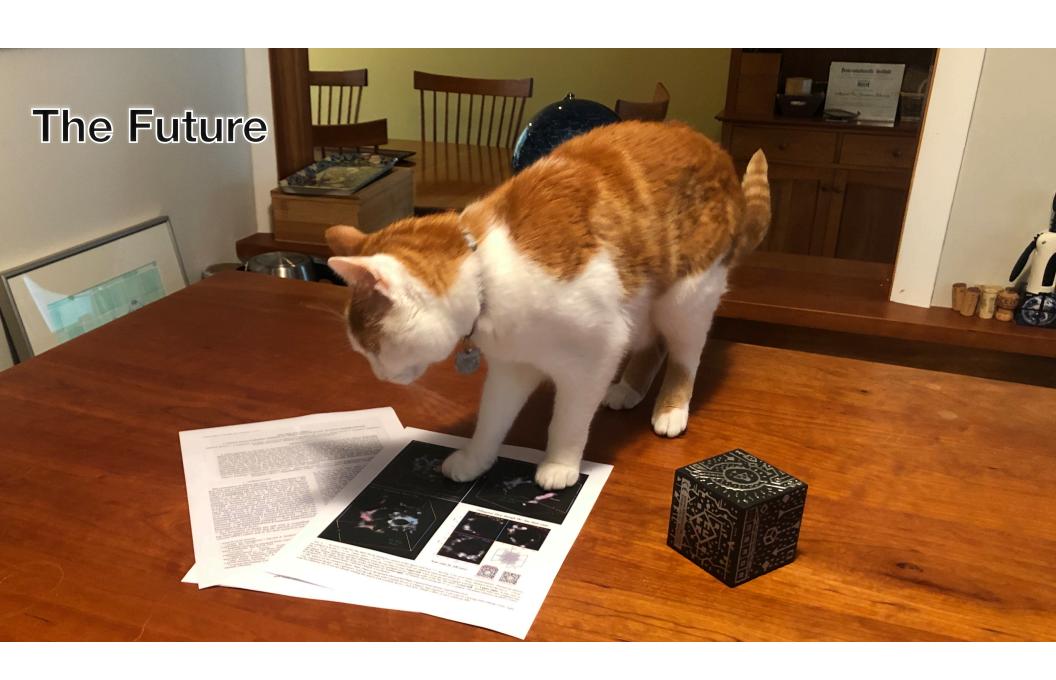

And how easy/hard is it to use?

The Future of

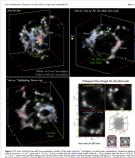

TINYURL.COM/UNIVERSE-

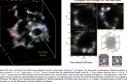

Augmented Reality is here-in AAS Journals!

In 2021, the Astrophysical Journal Letters published the first Augmented Reality (AR) figure in an AAS Journal. The AR-enhanced figure (right) appears in a paper by Bialy et al. presenting the discovery of the Perseus-Taurus Supershell. An AAS Nova article describes the discovery and the technology in more

Want to help the AAS bring you even-better AR experiences in the future?

Stop by the AAS booth (627) to help improve the AAS AR experience. If you participate in our user testing, you will leave with your very own augmented reality Merge Cube!

The video at tinyurl.com/Per-Tau-AR shows how it works.

To try out an AR figure on your smartphone, scan one of the QR codes above.

The left-hand QR code does NOT require a "Merge Cube," and the right-hand code does. First-time users will be prompted to download a free app. The flat-screen interactive version of the figure, also showing the QR codes, is available at TinyURL.com/Universe-in-My-Hand. AR funded by NSF.

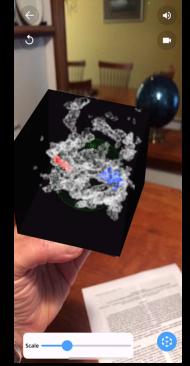

JGMENTED REALITY

Next...

glue in the browser, for real.

glupyter (a.k.a. "glue jupyter")

"glupyter" is a union of glue and Jupyter software environments. We think it may well be the future of glue, or "glue-qt" as experts sometimes call the desktop app version of glue. This webpage, hosted openly and freely by glue solutions, inc., serves as a clearinghouse for current information about glupyter-related projects. Some of these projects are funded by government agencies (notaby NSF and NASA), others by private foundations (e.g. The Gordon and Betty Moore Foundation), some as part of corporate collaborations $(e.g.\, \underline{Harvard} + \underline{Google\,Data} + \underline{Climate}), and some \,by \,open-source\,consulting\,work\,carried\,out\,by\,\underline{glue\,solutions,inc.}$

> The glue-jupyter GitHub repository is fully open, and more detal can be found on this Read the Docs page.

plug-ins galore!

THE SOFTWARE STORY

Thanks to digital data projection, today's planetariums can be used as immersive visualization spaces in both educational and research contexts. And, thanks to modern open-source, modular, approaches to software development, new visualization tools can be built by mixing, matching, and adding to established older ones. In 2019, a group of visualization experts meeting in Dagstuhl, Germany decided to try integrating elements of several astronomy data visualization packages, with the aim of creating new, flexible, data exploration environments that would be $\frac{1}{2} \left(\frac{1}{2} \right) = \frac{1}{2} \left(\frac{1}{2} \right) \left(\frac{1}{2} \right)$ useful in both research and educational contexts, on any size screen, including a planetarium dome. Since then, a series of gatherings and experiments at New York's Hayden Planetarium has led to the successful development of "plug-ins" that insert elements of one of three software packages (glue, WorldWide Telescope, OpenSpace) into the other two.
