

Each red dot marks a star-forming blob of gas whose distance from us has been accurately measured.

The Radcliffe Wave is **9000 light years long**, and **400 light years wide**, with crest and trough reaching **500 light years** out of the Galactic Plane. Its gas mass is **more than three million times** the mass of the Sun.

video created by the authors using AAS WorldWide Telescope (includes cartoon Milky Way by Robert Hurt)

ACTUALLY 2 IMPORTANT DEVELOPMENTS

DISTANCES!!

We can now

measure distances

to gas clouds in our own Milky Way galaxy to ~5% accuracy.

RADWAVE

Surprising wave-

like arrangement

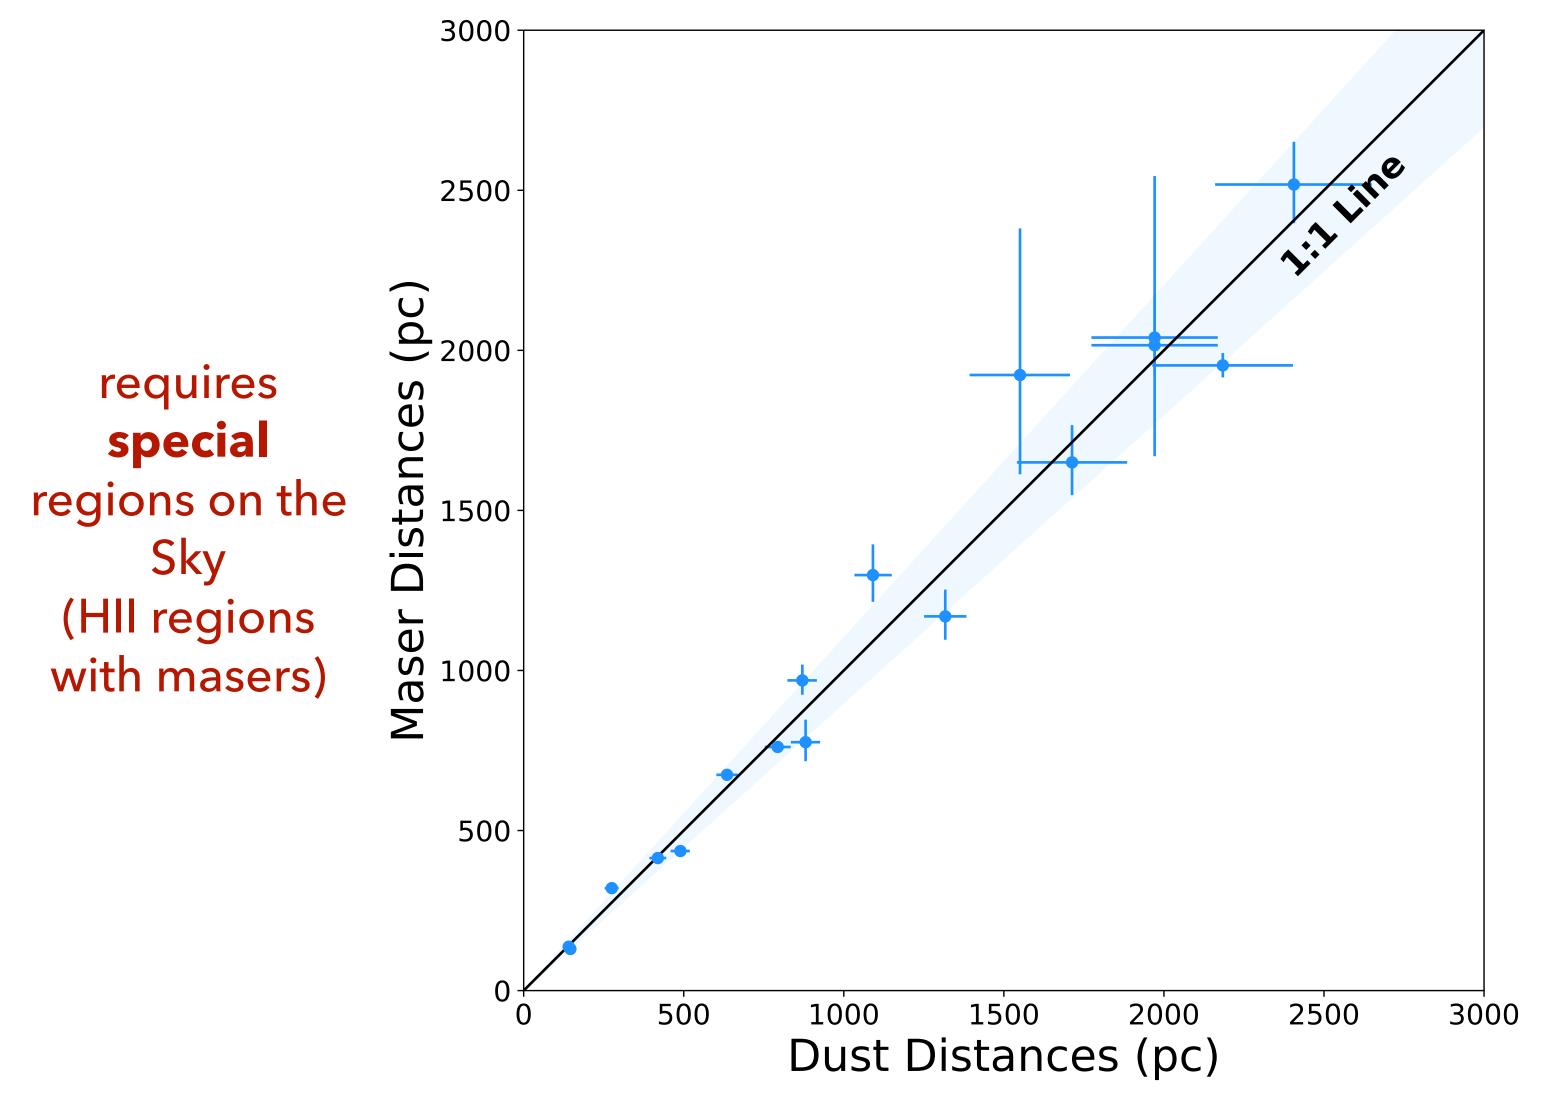

of star-forming gas is the "Local Arm" of the Milky Way.

"Why should I believe all this?"

DISTANCES!!

We can now measure distances to gas clouds in our

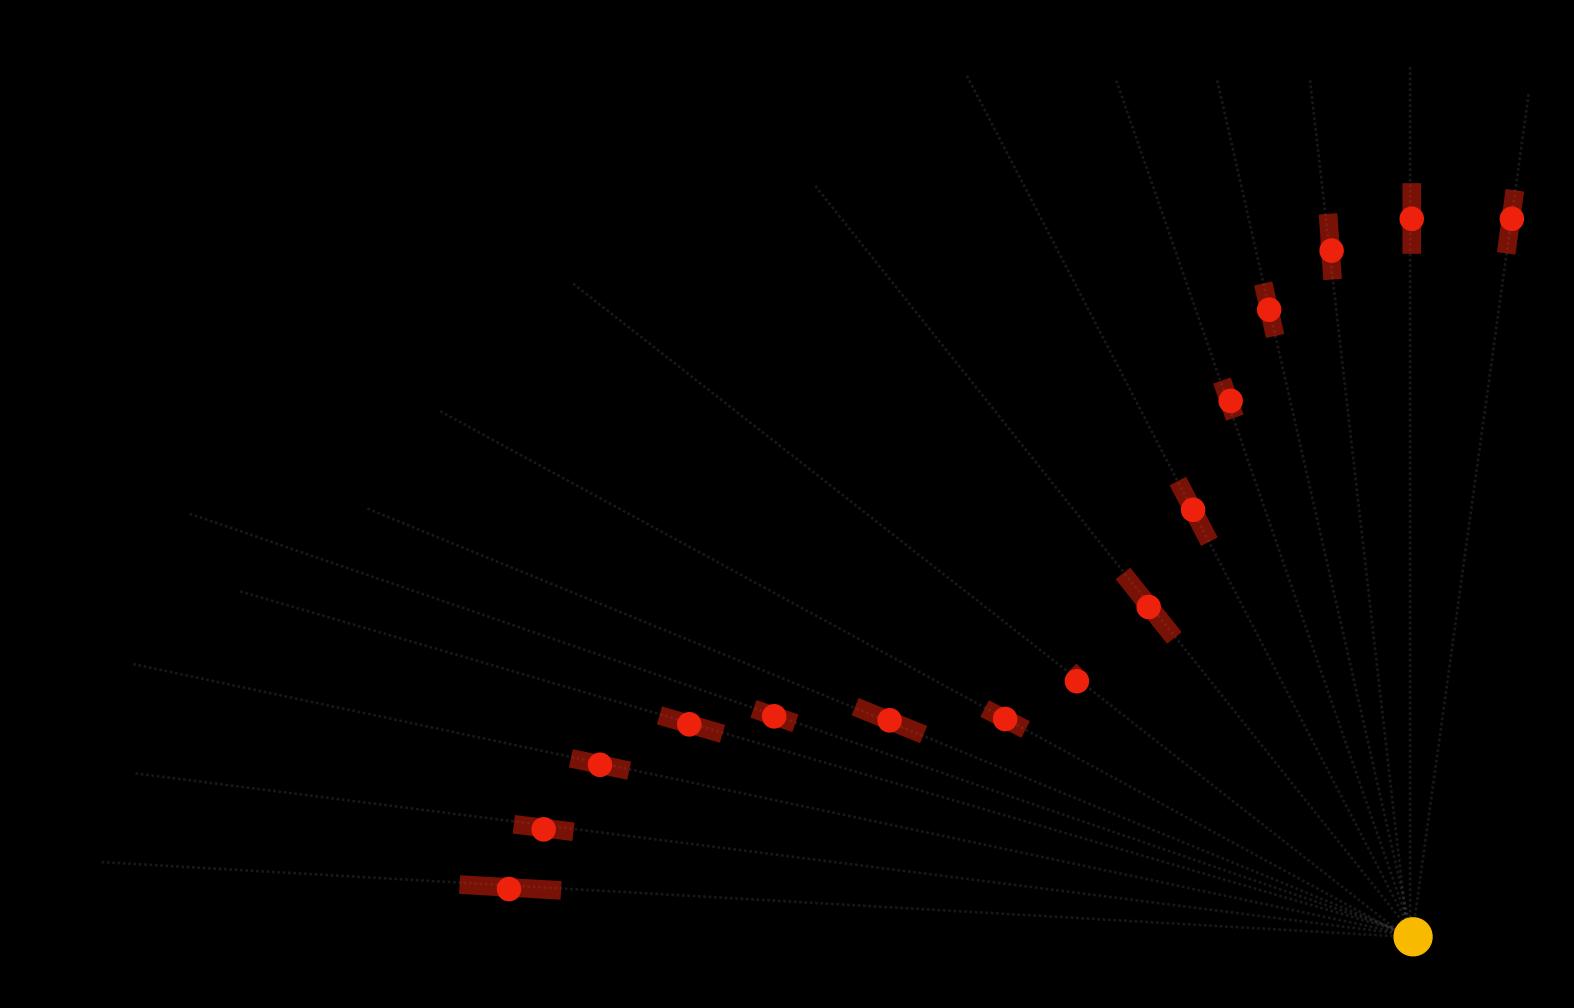

own Milky Way galaxy to ~5% accuracy.

can be used **anywhere** there's dust & measurable stellar properties

Uncertain Distances

HOW= 3D dust mapping*

+ Gaia*

+ glue*

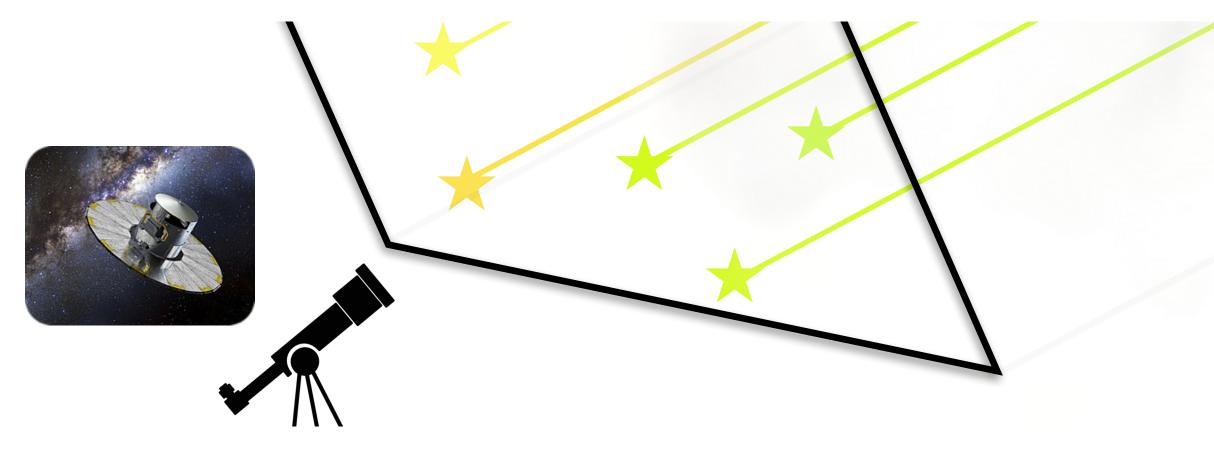

+ WorldWide Telescope

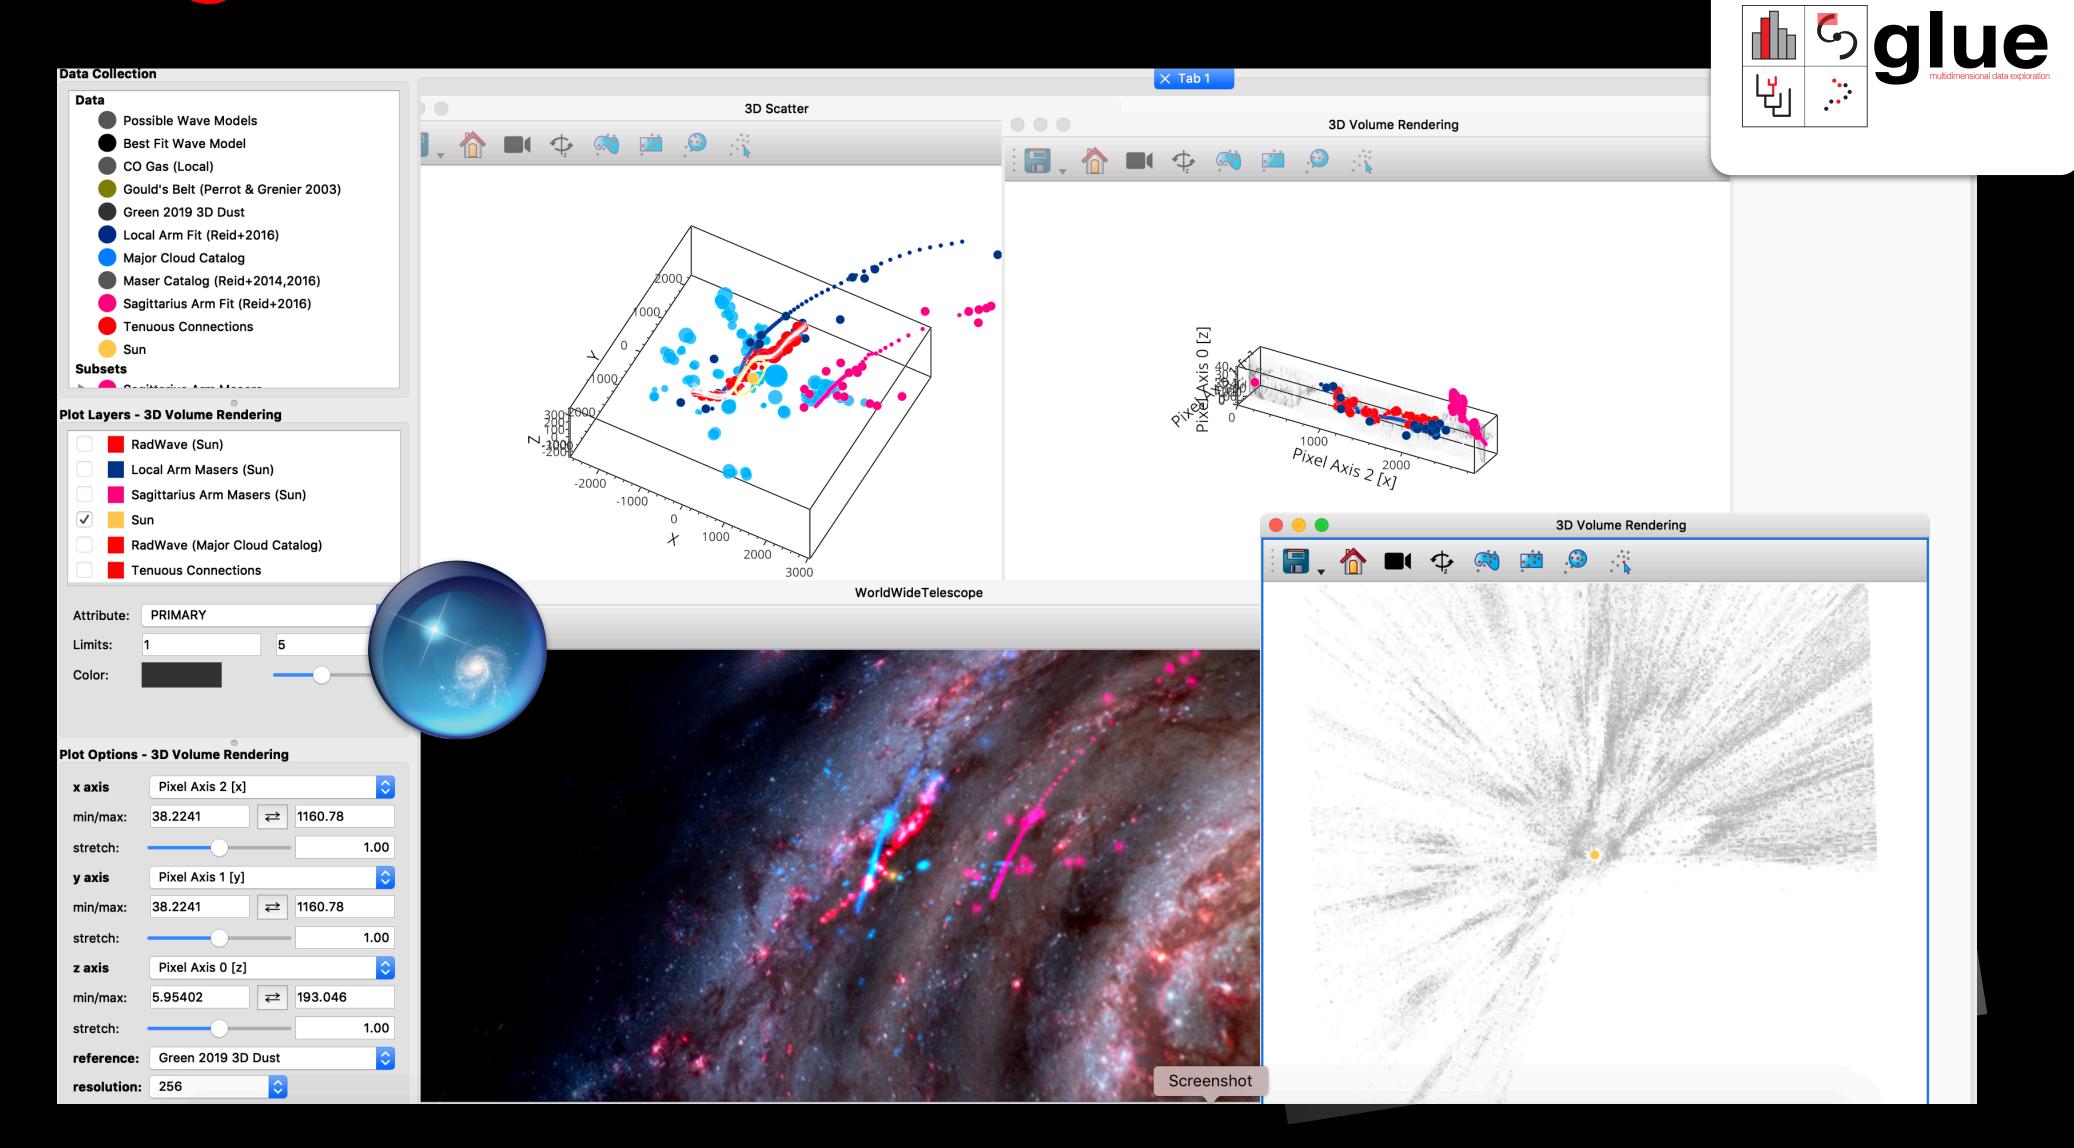

Can infer matter's distance from dust's effects on stars.

"Seeing" The Radcliffe Wave, in 3D

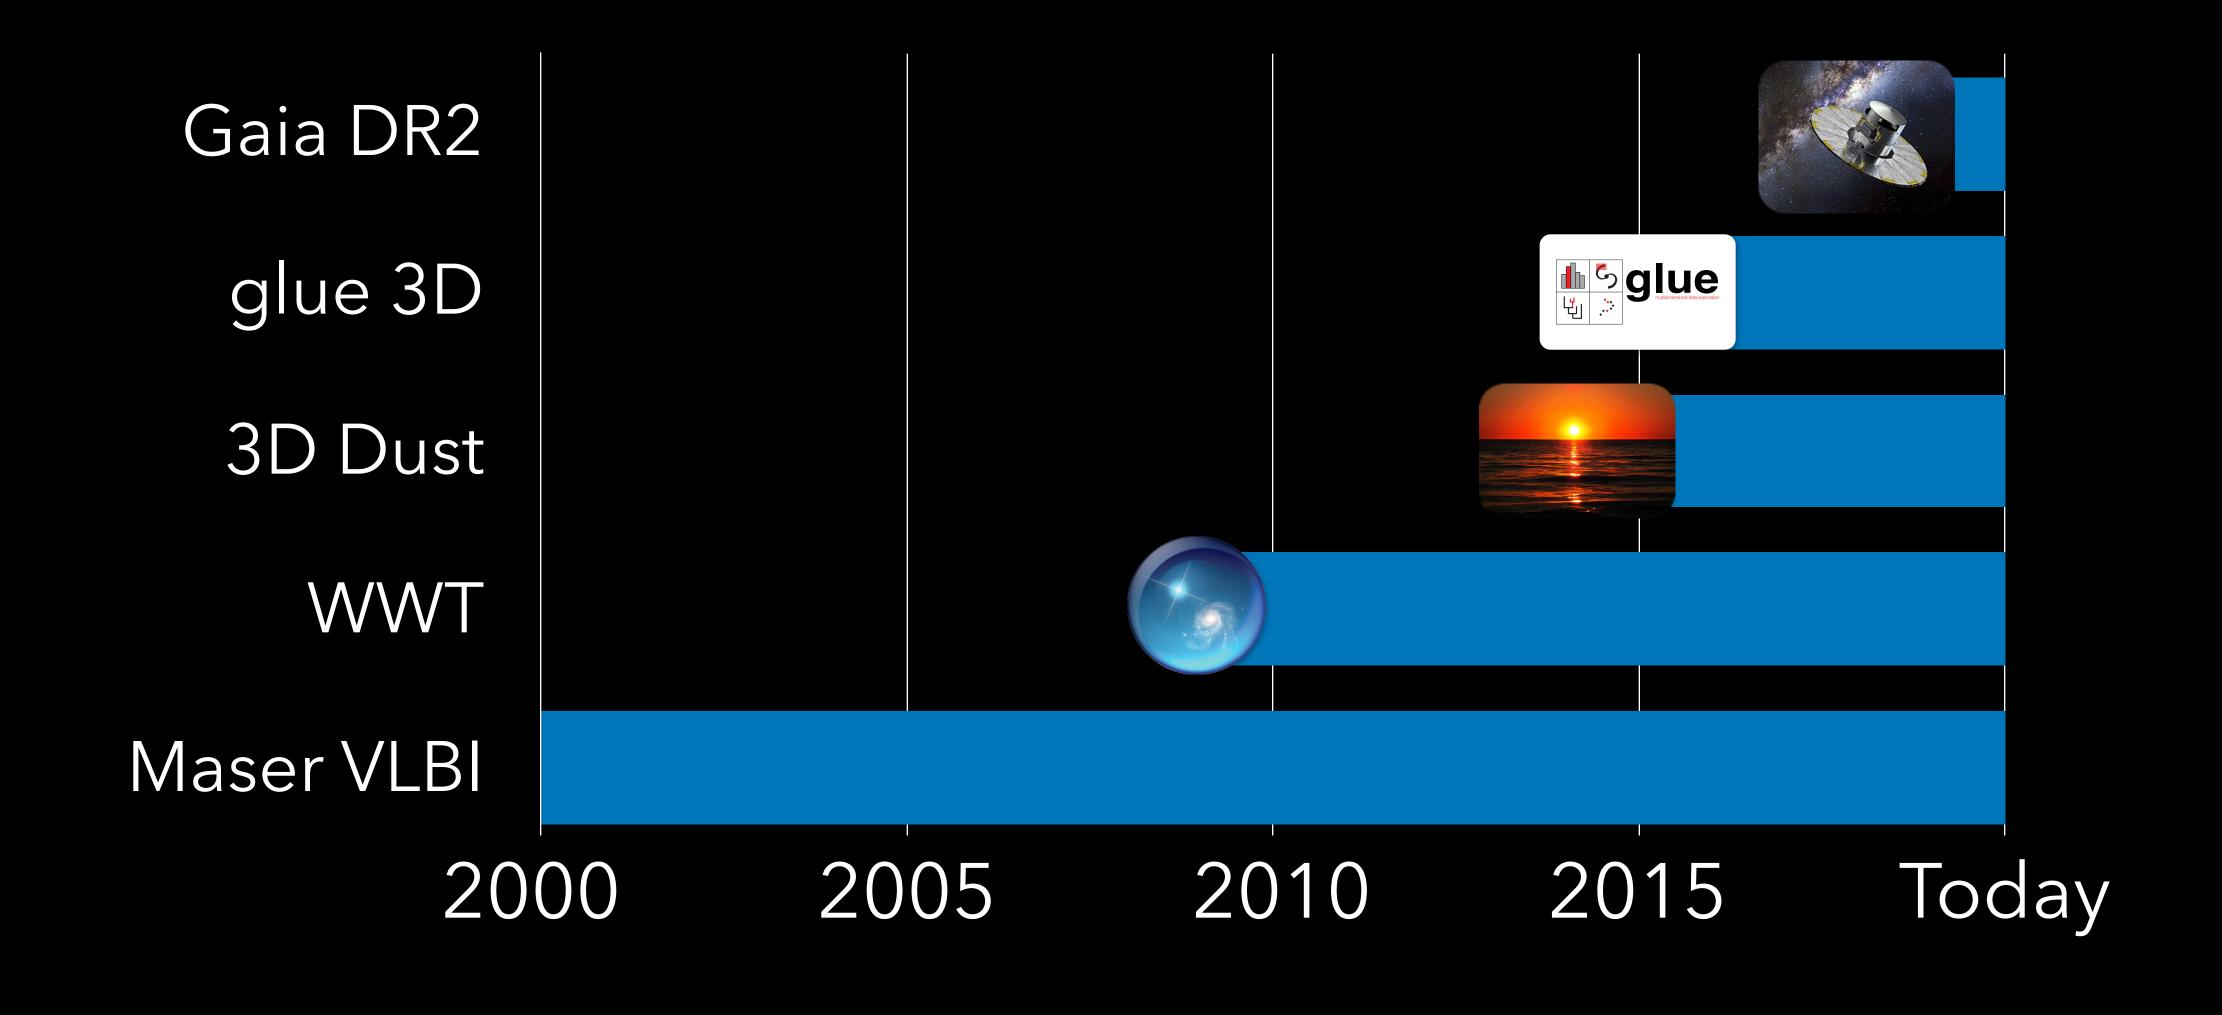

WHY DIDN'T WE FIND THE RADCLIFFE WAVE SOONER?

AAS WorldWide Telescope: worldwidetelescope.org

A Galactic-scale gas wave in the solar

João Alves, Catherine Zucker, Alyssa Goodman, Joshua Speagle, Stefan Meingast, Thomas Robitaille, Douglas Finkbeiner, Edward F. Schlafly, and Gregory Green 2020, *Nature* (today)

Alves et al. Nature paper & two distance catalog papers by Zucker et al. (2019, 2020) include several interactive figures (via plot.ly & bokeh), and deep links to data (on Dataverse) and code (on GitHub) inspired by AAS "Paper of the Future" (Goodman et al. 2015)

"So What," for Astronomers?

RADWAVE

Surprising wavelike arrangement of star-forming gas is the "Local Arm" of the Milky Way.

demise of "Gould's Belt"

end to 100-year-old paradigm

"Local Arm" not shaped as we thought it was, locally

arm is "straight" from top-down

big wave in "arm" never previously observed

wave's origin unknown (collision? dark matter? accretion?)

What is the ORIGIN of the Radcliffe Wave? Collision?

Do other parts of the Milky Way show this wavy structure? How about other galaxies?

How can we SEARCH?

What do "waves" mean for the STAR-FORMING HISTORIES of galaxies?

Our COLLABORATION: João Alves^{1,3}, Catherine Zucker², Alyssa Goodman^{2,3}, Joshua Speagle², Stefan Meingast¹, Thomas Robitaille⁴, Douglas Finkbeiner³, Edward Schlafly⁵ & Gregory Green⁶

Hubble's "Tuning Fork"

The diagram is a schematic representation of the sequences of classification. A few nebule of mixed types are found between the two sequences of spirals. The transition stage, S0, is more or less hypothetical. The transition between E7 and SB, is smooth and continuous. Between E7 and SB, no nebulæ are definitely recognized.

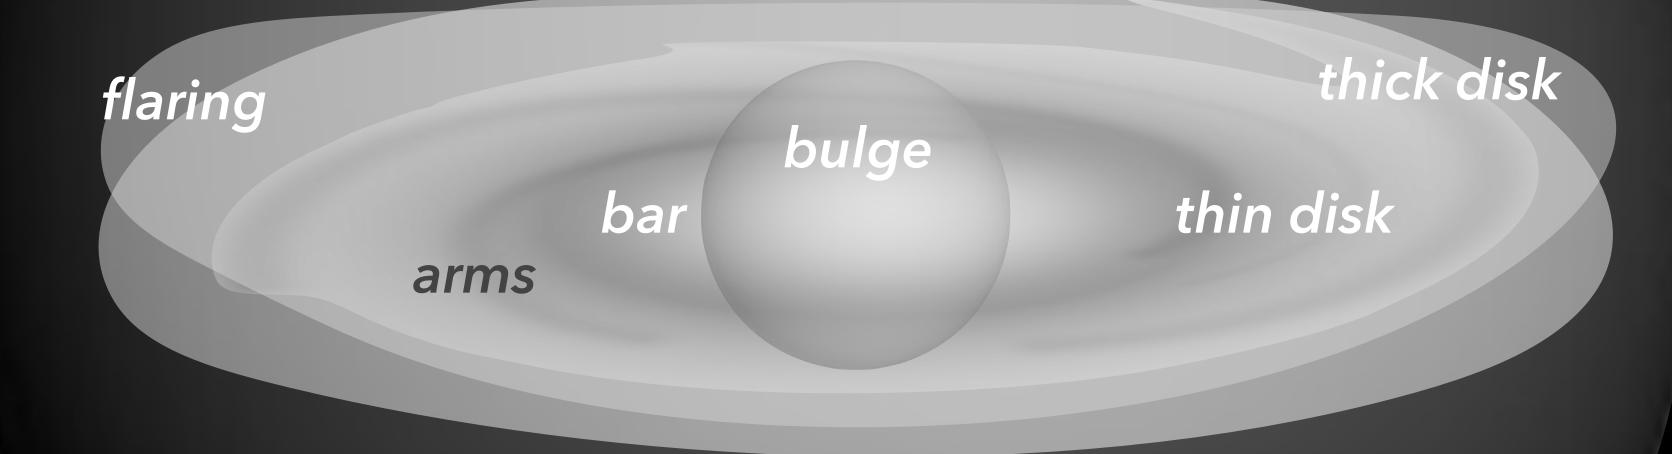

The Spitzer Infrared Nearby Galaxies Survey (SINGS) Hubble Tuning-Fork

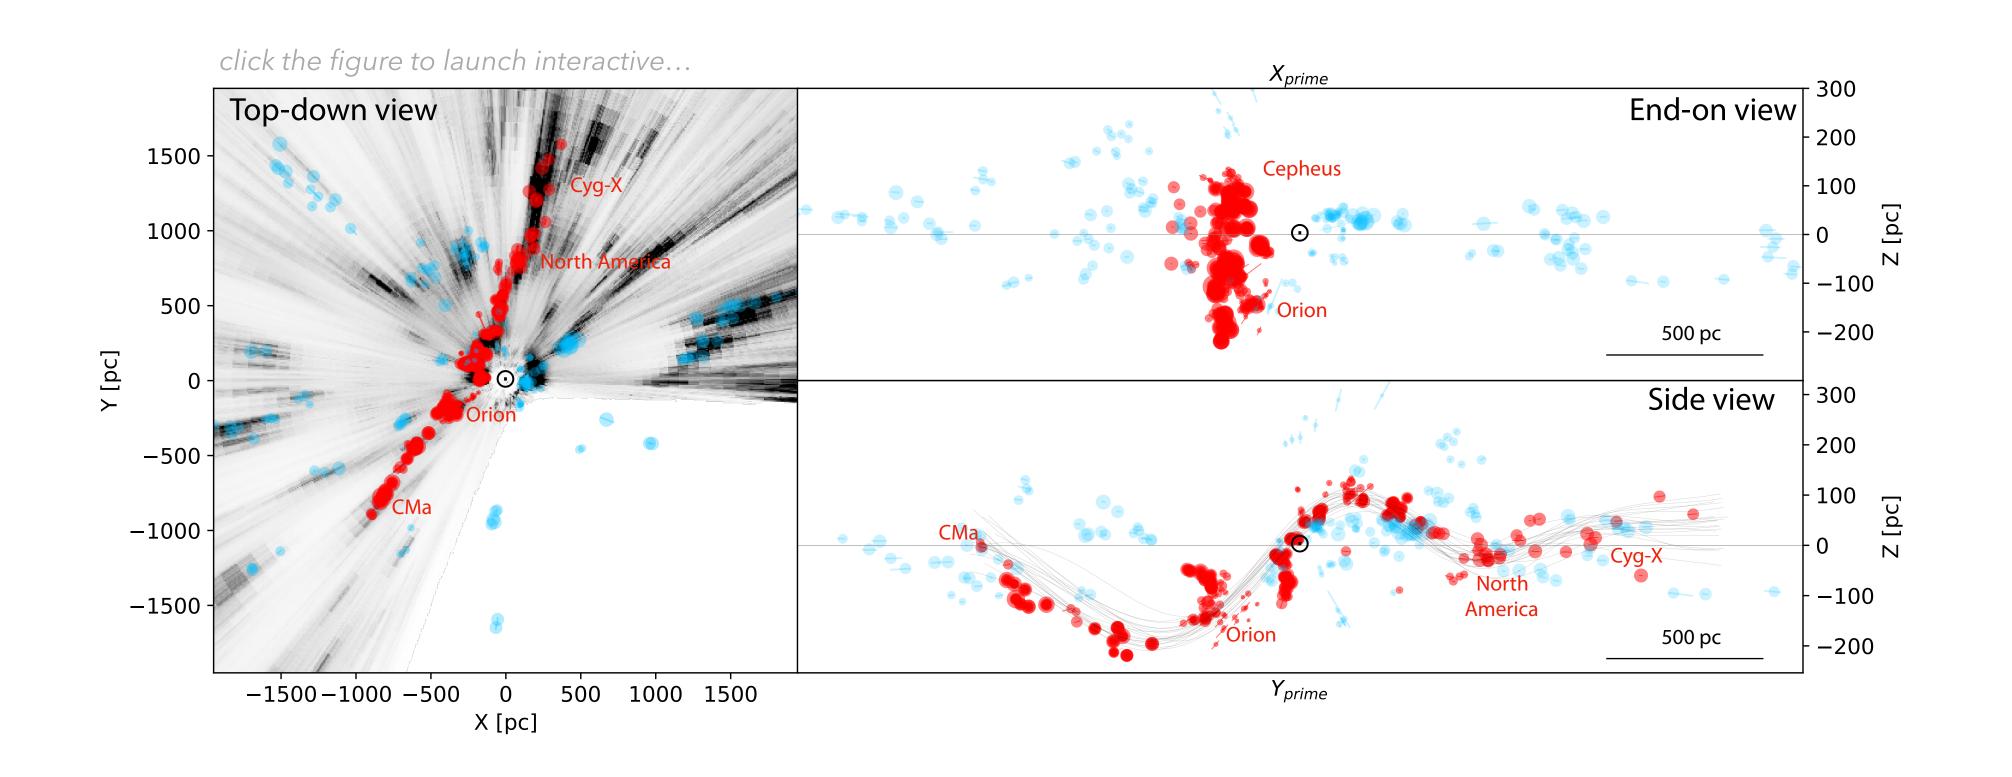

UGC 12158 (Mark Reid's favorite Milky Way analog)
