

## glue-ing together the Milky Way

Alyssa Goodman, Center for Astrophysics | Harvard & Smithsonian

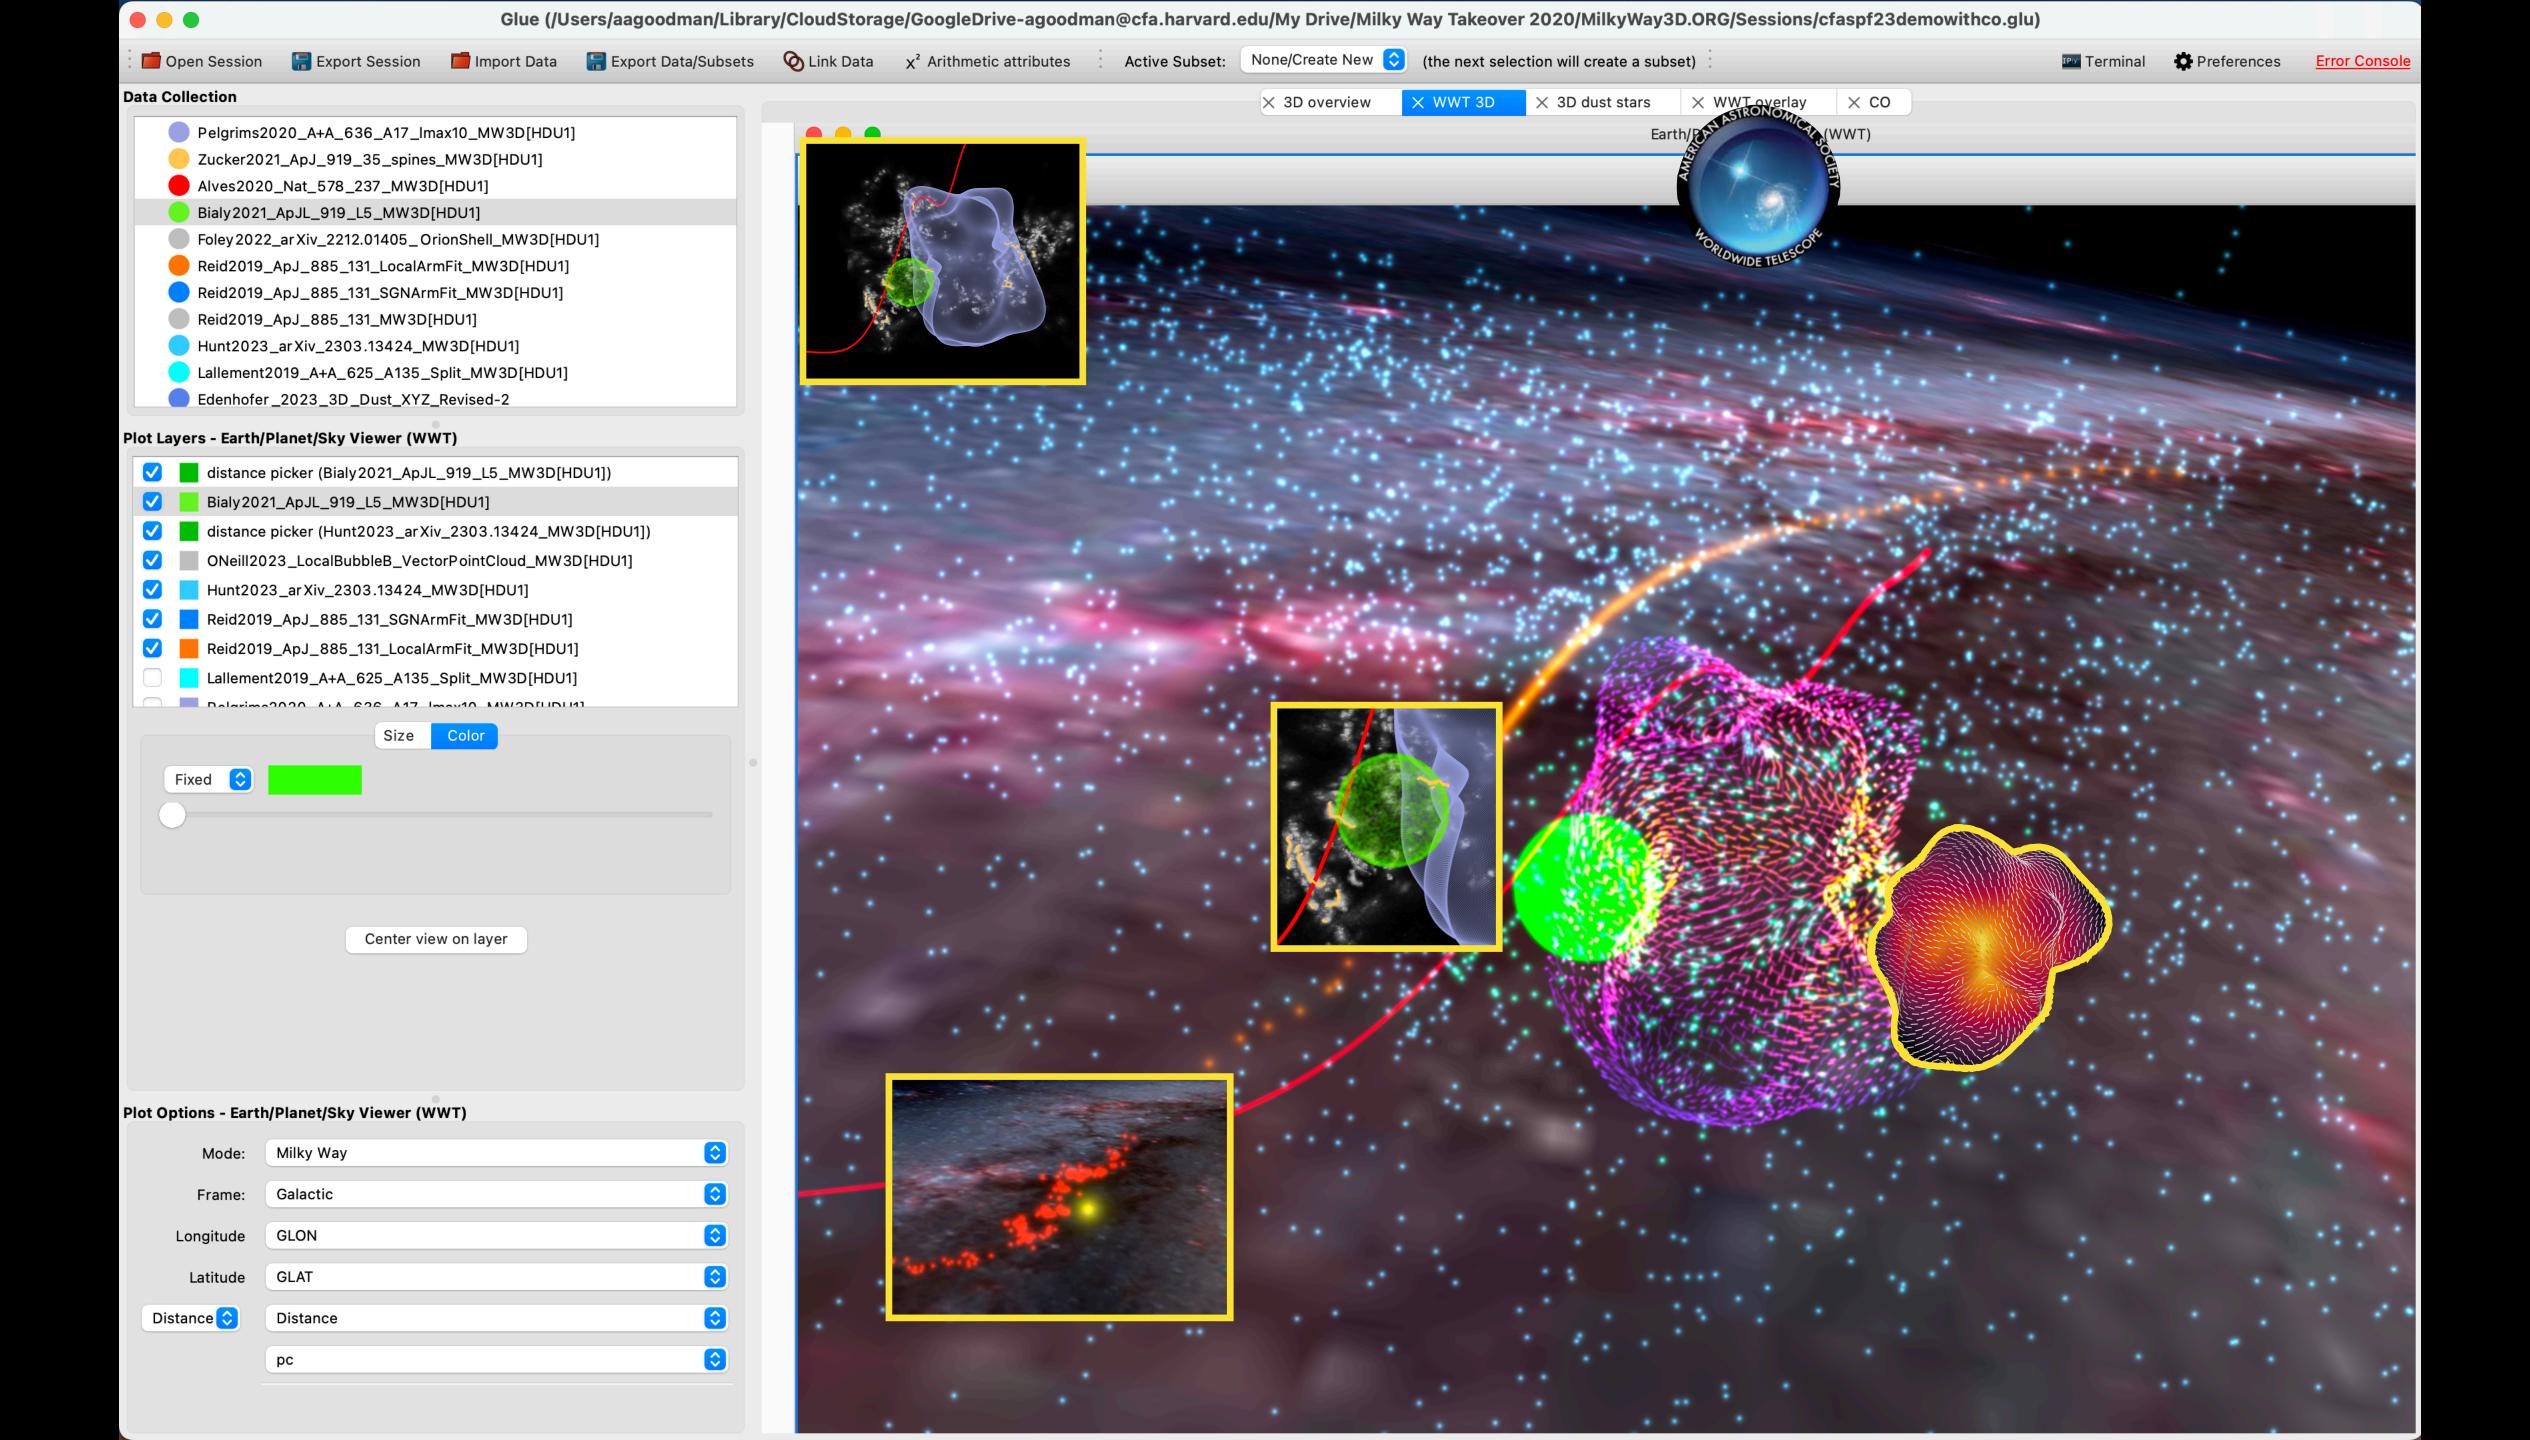

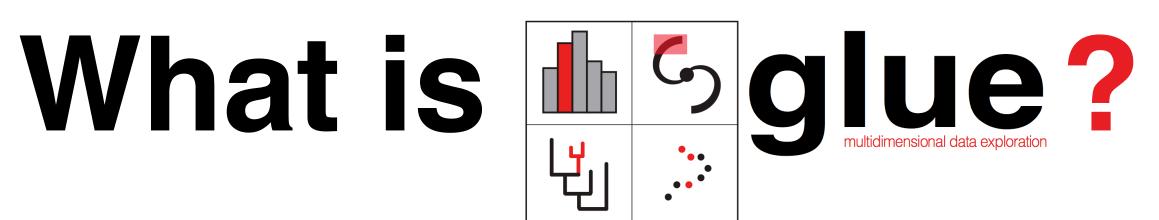

## It's not an acronym.

It is open-source software that glues data, glues graphs & glues tools.

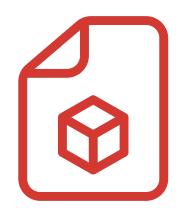

### data

numbers (tables, arrays, spreadsheets)

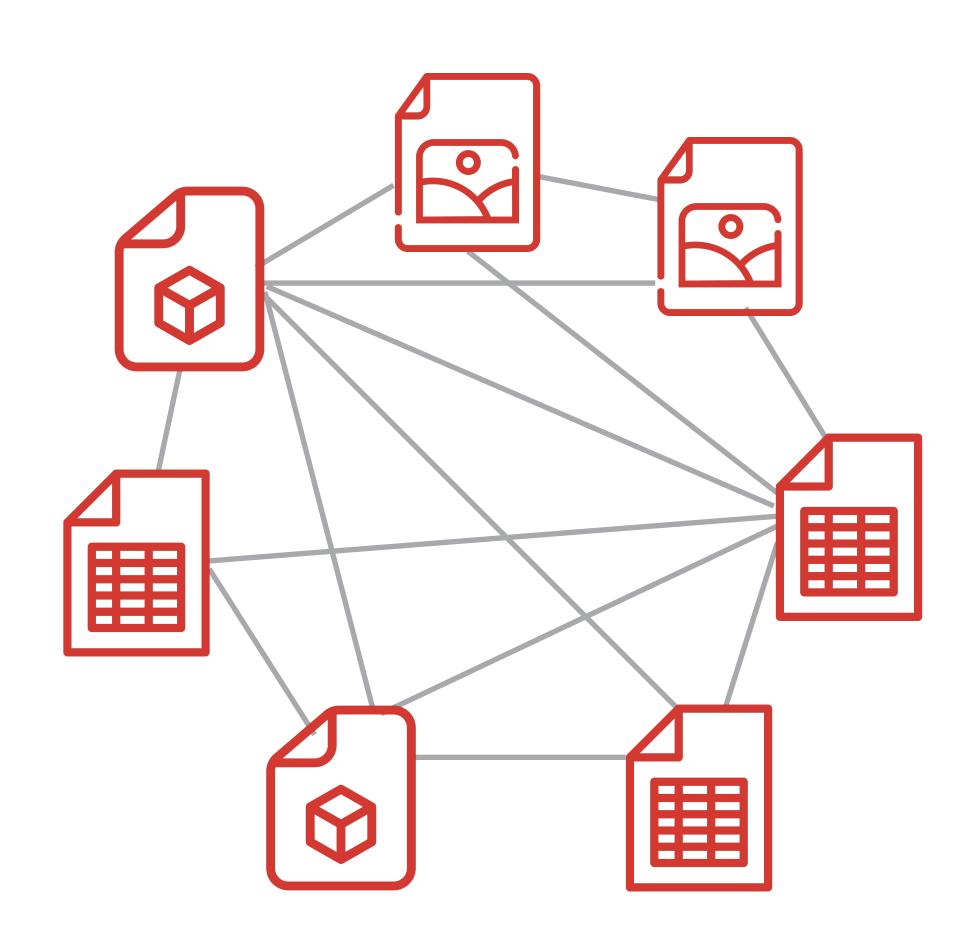

images & maps (FITS, JPEG, GIS and more)

data cubes (3D, 4D, and more)

## data files' common attributes are glued

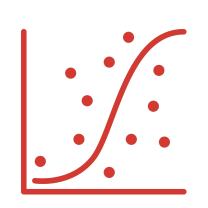

## avoiding the need to merge data files

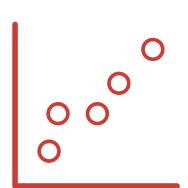

## "graphs"

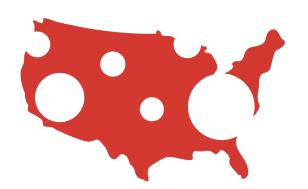

### common statistical graphics

(scatterplots, histograms, tables, curves, overlays)

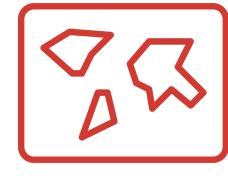

### maps & images

(greyscale, color, contours, layer control...)

#### 3D displays

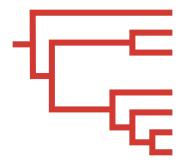

(scatter plots, volumetric rendering, sliders...)

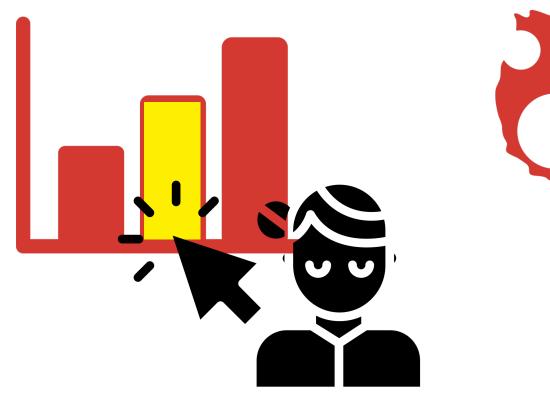

### specialized & custom charts

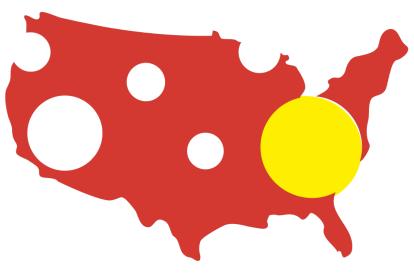

(dendrograms, polar plots, + domain-specific options)

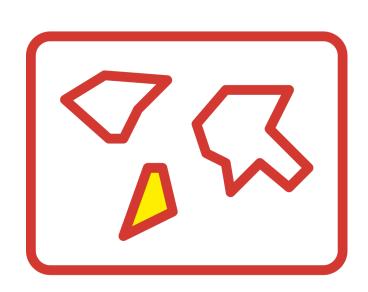

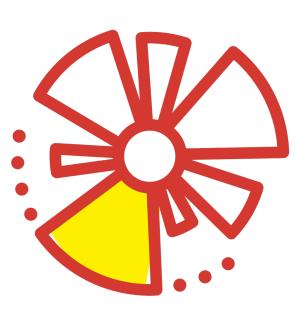

## selections propagate across all graphs

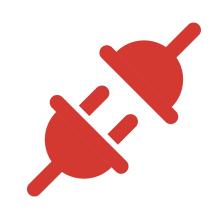

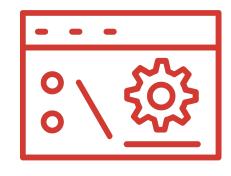

## for real-time data exploration & insight

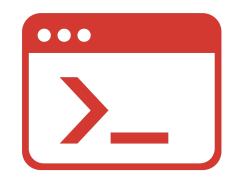

### tools

plug-ins (user-defined formats, plots, layouts...)

% Web services (across domains)

command-line (built-in terminal, scriptable)

## for easy customization

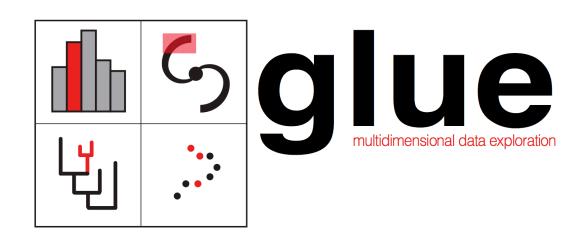

## glues data, glues graphs & glues tools.

glueviz.org

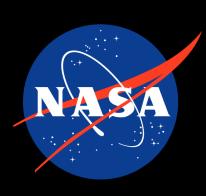

### BONUS: save, share, or publish what you learn—

save "sessions" to continue where you left off export graphics use/export to Jupyter environments export to plot.ly (javascript) export to augmented reality

learn how at glueviz.org.

#### **Linked Visualizations**

With Glue, users can create scatter plots, histograms and images (2D and 3D) of their data. Glue is focused on the brushing and linking paradigm, where selections in any graph propagate to all others.

#### Flexible linking across data

Glue uses the logical links that exist between different data sets to overlay visualizations of different data, and to propagate selections across data sets. These links are specified by the user, and are arbitrarily flexible

#### **Full scripting capability**

Glue is written in Python, and built on top of its standard scientific libraries (i.e., Numpy, Matplotlib, Scipy). Users can easily integrate their own python code for data input, cleaning, and analysis.

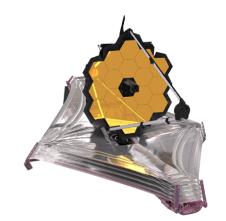

gluesolutions, inc.

#### glupyter (a.k.a. "glue jupyter")

"glupyter" is a union of glue and Jupyter software environments. We think it may well be the future of glue, or "glue-qt" as experts sometimes call the desktop app version of glue. This webpage, hosted openly and freely by glue solutions, inc., serves as a clearinghouse for current information about open-source glupyter-related projects. Some of these projects are funded by government agencies (notably NSF and NASA), others by private foundations (e.g. The Gordon and Betty Moore Foundation), some as part of corporate collaborations (e.g. <u>Harvard+Google Data+Climate</u>), and some by open-source consulting work carried out by <u>glue solutions</u>, inc.

> The glue-jupyter GitHub repository is fully open, and more detail can be found on this Read the Docs page.

SUPERSHELL

# The "New Milky" Way online (early 2023 edition)

2020 2023

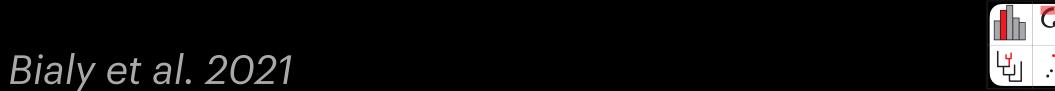

**Dataverse** 

the region. Perseus and Taurus and their diffuse envelopes are arranged on two opposing sides of the Per-Tau shell. Bottom-left panel: another side view emphasizing the Tau Ring. The ellipse is the Tau Ring model (Appendix B). Bottom-right panel: 2D density slices along the xy, xz, yz planes. All planes intersect at shell's center. In all panels xyz are the Heliocentric Cartesian Galactic Coordinates.

- 2. Tau Ring: in a sky projection the Tau Ring is seen almost edge-on. The near side of the Tau Ring connects with the main body of Taurus at  $d \approx 150$  pc, whereas the farthest part extends to  $d \approx 220$  pc.
- 3. The Fictitious Connection: A filament seems to connect Taurus to Perseus. This connection is only a coincidental projection effect, where in actuality the filament is located at the distance of Taurus, and does not physically connect

## glue-ing together the Milky Way

Alyssa Goodman, Center for Astrophysics | Harvard & Smithsonian

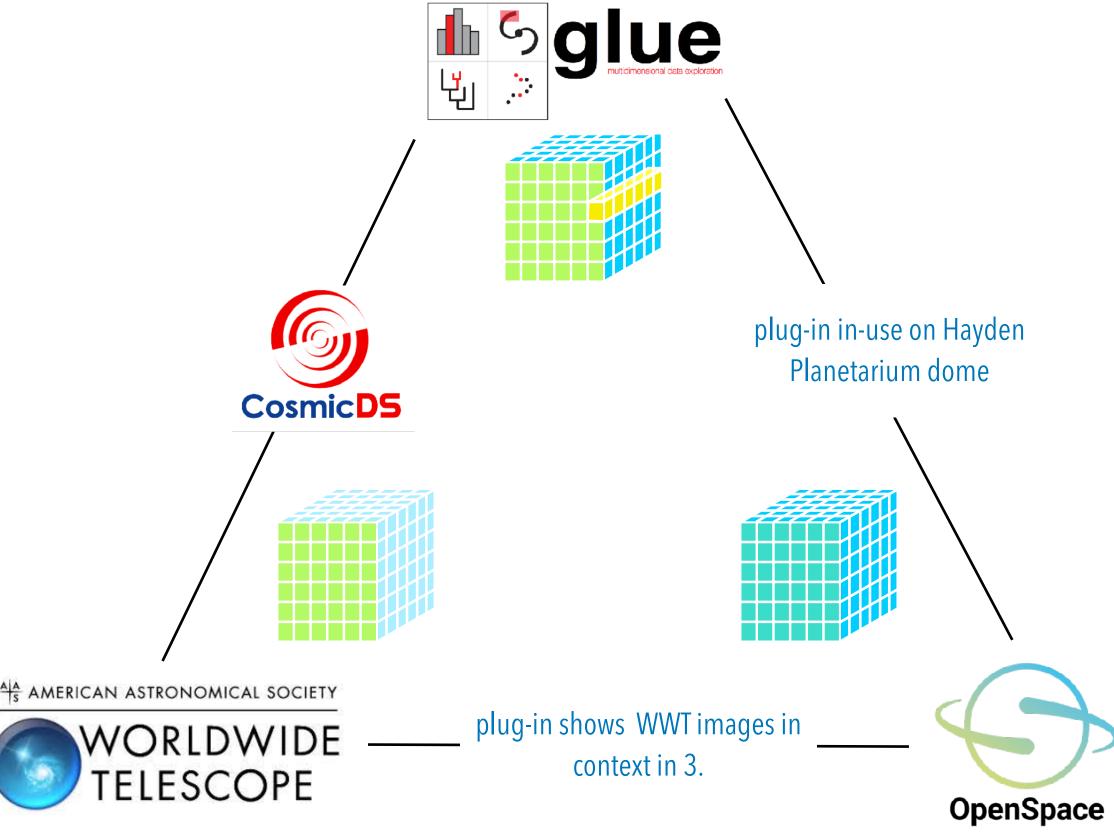

great 1D, 2D and 3D data manipulation, flexible architecture facilitating plug-ins, data transfer, and interactive data exploration; "glupyter" flavor runs in web pages

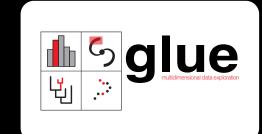

great 2D object and all-sky images
limited 3D functionality

limited 2D all-sky images great 3D functionality

### The "Perseus-Taurus Superbubble" a demo of the need for 2D-3D contextualization functionality

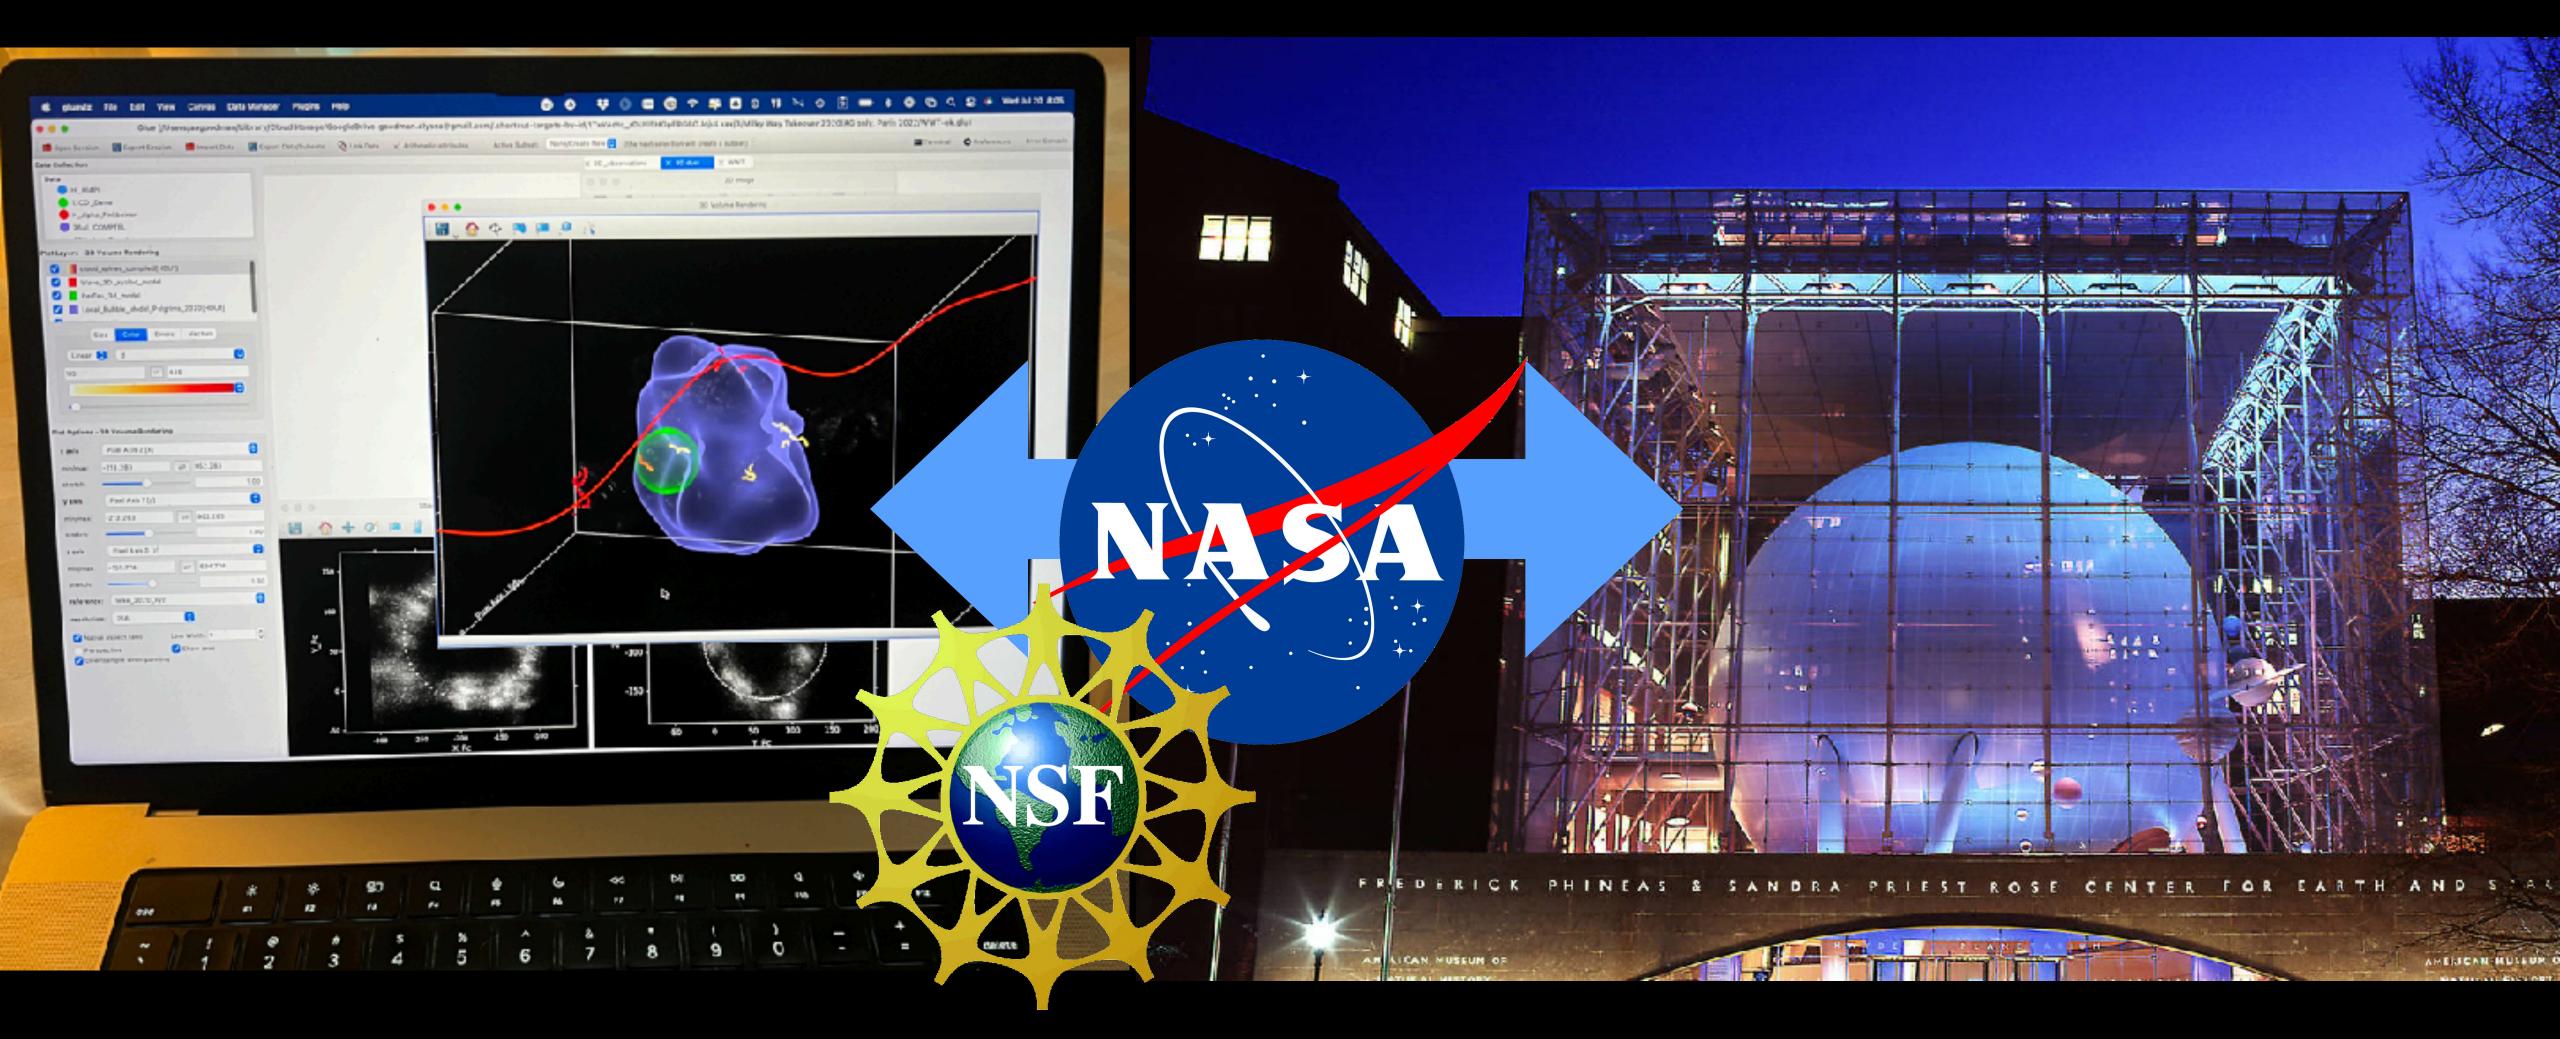

This video was composited using the WWT and OpenSpace, making some use of prototype plug-ins, but 2D and 3D imagery was aligned manually by experts. As a generalizable STEM concept, it explains the deceptive "forced perspective" made possible in when objects at very different distances, in 3D, appear to touch in 2D.

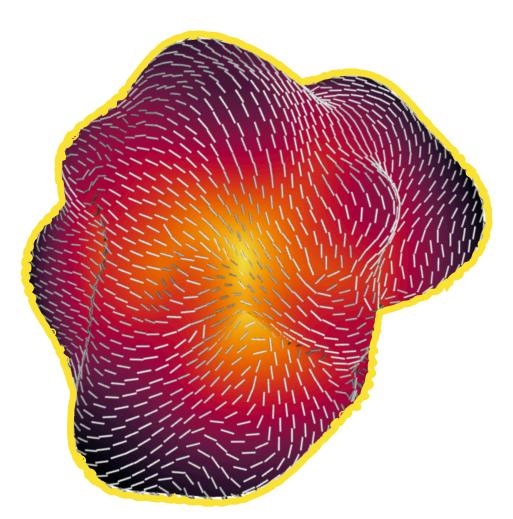

#### A 3D Map of the Local Bubble's Magnetic Field
