

Planning Group Meeting
Women and the Undergraduate Economics Major
NBER, 1050 Massachusetts Ave. Cambridge MA
Saturday, November 15, 2014

Background Facts: Summary of Tables and Figures

Figures 1, 2, and 3.

- The data are for 2013. The computation of the fraction of BAs who are economics majors and the conversion ratio is done in two ways. The first is the mean of the separate institution figures. The second is the population mean of all students in institutions with economics majors. The first is preferred in thinking about separate institutions but the second provides the aggregate national average (by type of institution).
- Note that the ratios derived from the mean of the population are, in general, lower than the ratios derived from the means of the separate institutions. This is particularly true for the private institutions in the top 100.
- Conversion ratios are almost always higher for the average of the separate ratios than for the national population average.
- In 2013 the average of all the ratios is around 4 whereas the average in the population is just below 3. Clearly there are lots of institutions with very high ratios.

Table 1:

- 326 institutions have ≥ 15 economics majors per year, on average from 2011-13.
- 278 have ≥ 20 economics majors per year, on average from 2011-13.
- Presence of a business major siphons off women from economics. Conversion ratios ($= [\text{Male Econos}/\text{Male BAs}]/[\text{Female Econos}/\text{Female BAs}]$) are higher in the samples with a business major.
- Fraction of all BA women majoring in economics is higher at all women's institutions than at all top Liberal Arts Colleges.
- Note that conversion ratios show fewer women (aggregate means) than unweighted (means by institution). See summary statistics for Figures 1, 2, and 3 for the unweighted means.

Table 2:

- Business majors tend to have more women relative to economics majors, except possibly in Finance.

- Women go disproportionately into Human Resources, Accounting, International Business, and Marketing.

Table 3:

- “Top 100” universities have a conversion ratio of about 3 to 1.
- Engineering schools have a much higher fraction of economics majors who are women probably because economics is viewed as less mathematical and abstract in an engineering school.

Table 4:

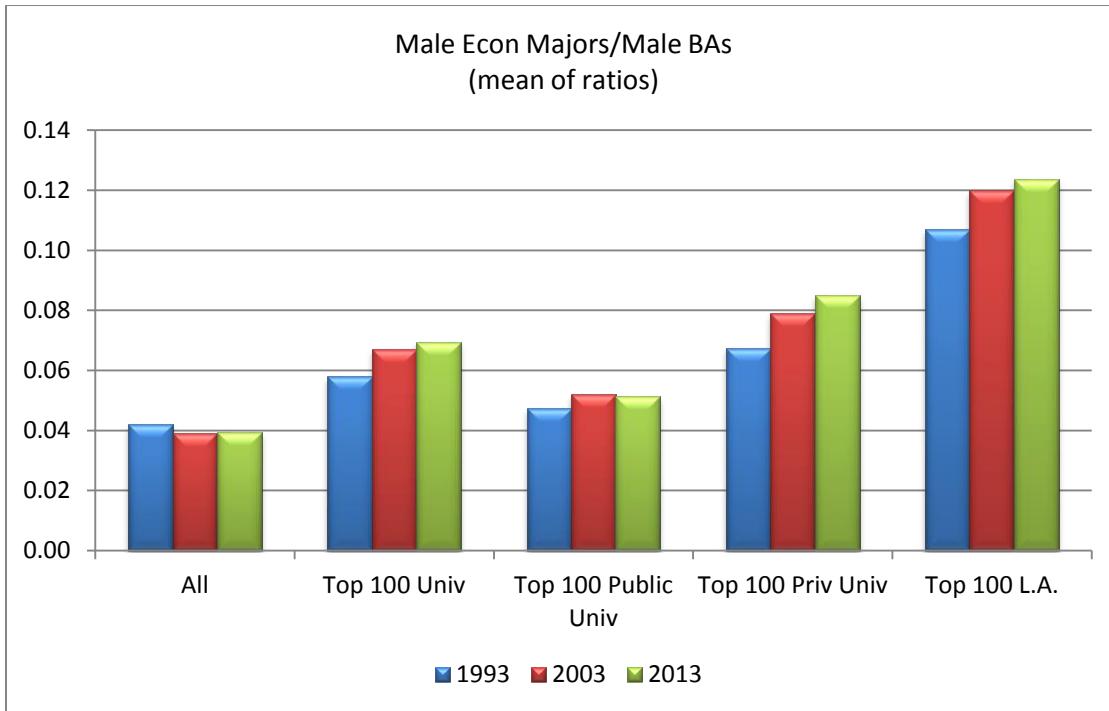

- “Top 100” liberal arts colleges have a higher conversion ratio than the “top 100” universities. It is unclear, at this point, why this is the case and to what majors women gravitate in these elite liberal arts colleges.
- We are exploring why places like Swarthmore, Lafayette, Macalester, and Knox are lower, that is why they attract relatively more women to their economics majors.
- The number of economics majors at these schools is fairly low, although some attract a substantial group of the male students (e.g., Claremont McKenna, Occidental, Colorado College, Trinity College, Centre College, Bowdoin, Colby, Holy Cross, Williams, Hamilton, Union, Lafayette, Ursinus).
- Among the women’s colleges in the “top 100” group Wellesley stands out as having a substantial fraction of its undergraduates as economics majors. But as good as it is, it is lower than the fraction of males majoring in economics in many of the leading coeducational liberal arts colleges.

Table 5:

- How can we recruit the institutions in Table 5, that is those with extremely large undergraduate programs, to join the “Challenge”? Are their undergraduate offices already overburdened? If so, what can we do about helping them?
- Note that many of these institutions have extremely large business programs. Should we think about whether having a female undergraduate major in business at most of these institutions is equal to or even better than having one major in economics? What is gained by taking the marginal woman from business and moving her to economics?

Figure 1: Male Economics Majors as a Fraction of BAs: 1993, 2003, and 2013

Part A: Mean of the Separate Institution Ratios

Part B: Mean of the Population Sums

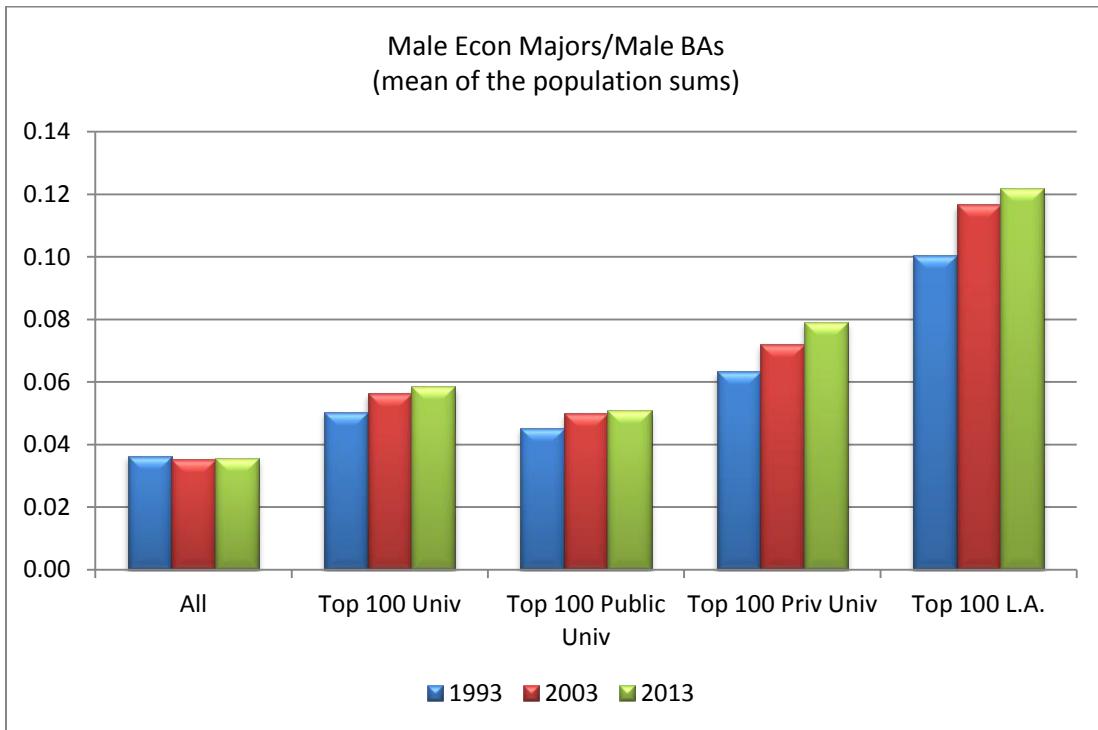

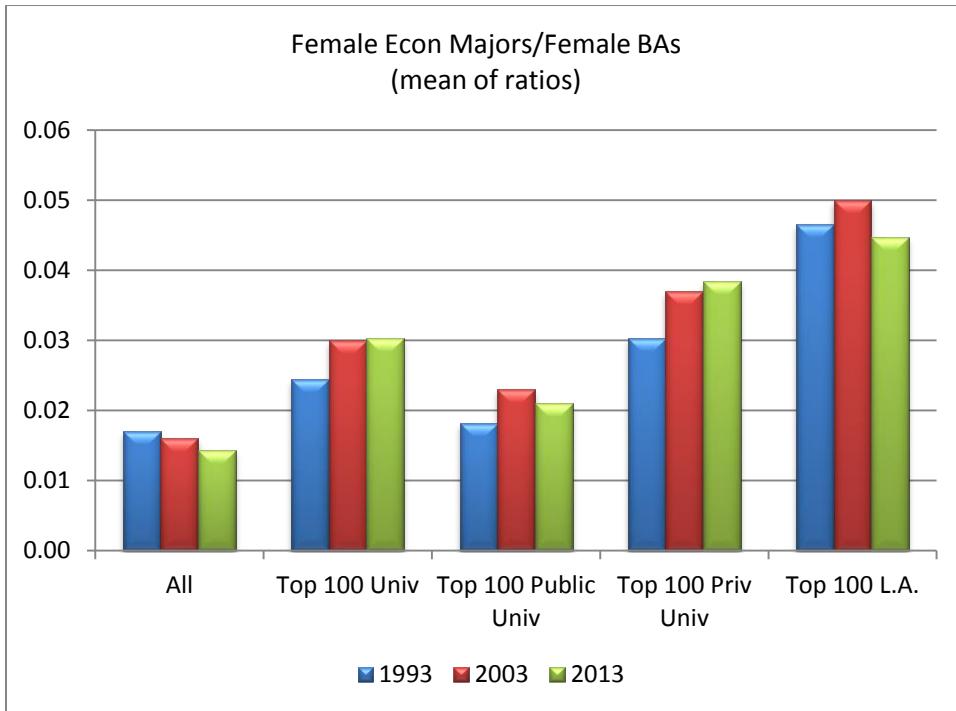

Figure 2: Female Economics Majors as a Fraction of BAs: 1993, 2003, and 2013

Part A: Mean of the Separate Institution Ratios

Part B: Mean of the Population Sums

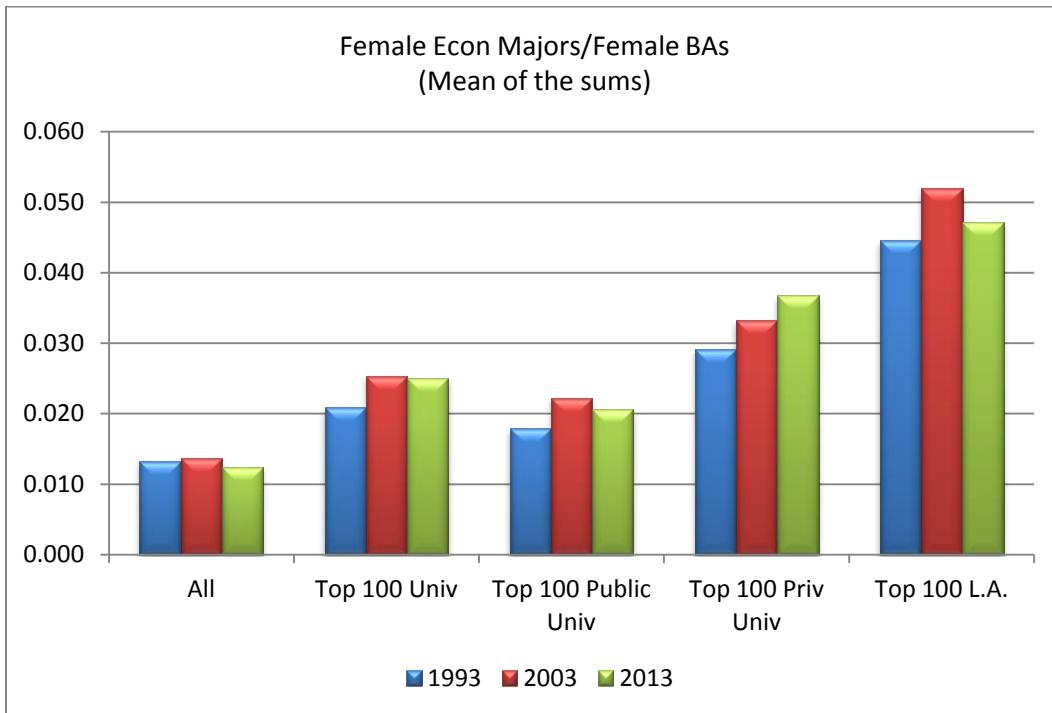

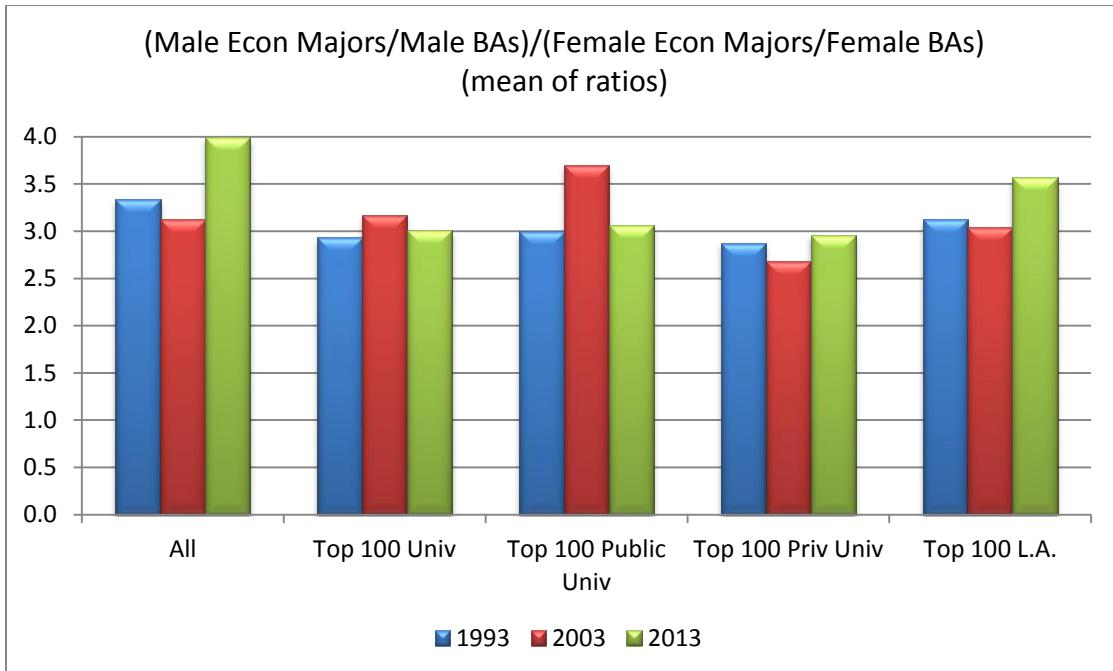

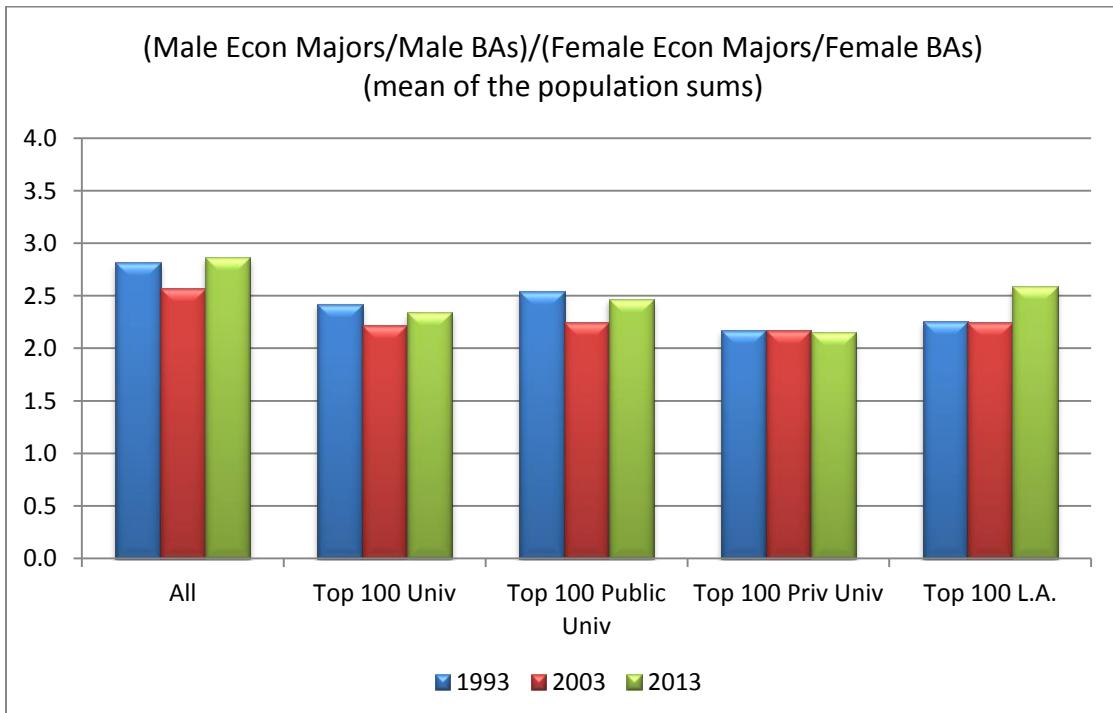

Figure 3: Conversion Rates by Type of Institution: 1993, 2003, and 2013

Part A: Mean of the Separate Institution Ratios

Part B: Average of the Population Sums

Sources: IPEDS, 2013.

Notes: Institutions included are those that have an economics major and gave at least one BA in economics in 2013. “All” is all coeducational institutions with an economics major; “top 100” universities is given by the *US News and World Report* list combined for 2011 and 2013; top 100 public or private is the public or private group within the “top 100”; “top 100 L.A.” is the top 100 *US News and World Report* list combined for 2011 and 2013 for liberal arts colleges.

Table 1: Summary Facts about Institutions with an Economics BA Program (2011-2013)

Institutions with an Economics BA Program	Number of Institutions (1)	Median Number of Male BAs at School (2)	Median		Fraction Males of Economics Majors (5)	Fraction Females of Economics Majors (6)	M/F Conversion Rate for Economics BAs (7)
			Number of Female BAs at School (3)	Fraction Economics Majors of BAs (4)			
All (coeducational)	696	412	574	0.023	0.037	0.012	4.035
With \geq 15 BA majors	326	815	1011	0.030	0.046	0.016	3.939
With \geq 20 BA majors	278	825	1094	0.032	0.050	0.018	3.869
Public institutions	148	1801	2094	0.026	0.041	0.013	4.056
Private institutions	130	331	419	0.060	0.089	0.035	3.097
With business major and \geq 5 econ BA majors	455	676	897	0.023	0.035	0.012	4.121

Notes: Number of institutions is the average of 2011, 2012 and 2013. This table is a summary of the information in Tables 3 and 4. A three year average was chosen because many institutions have few majors in any one year. “Top 100” universities and “top 100” Liberal Arts colleges are given by the *US News and World Report* list combined for 2011 and 2013. Conversion ratio is (Male Econs/Male BAs)/(Female Econs/Female BAs) and is the average of the conversion ratio computed for each of the three years. n.a. = not available or not relevant. Fractions of each group majoring in economics and the conversion ratio are weighted averages, that is the figures are those of the aggregate.

Table 2: Summary Facts about Institutions with an Undergraduate Business Major and ≥ 5 Economics BAs (2011 to 2013)

Coeducational Institutions with a Business Major and ≥ 5 Economics BAs	Number of Institutions Offering Program	Median #	Median #	Business	Fraction	Fraction	M/F
		of Male BAs at School	of Female BAs at School	Majors as Fraction of BAs	Males of Business Majors	Females of Business Majors	Conversion Rate for Business Major BAs
	(1)	(2)	(3)	(4)	(5)	(6)	(7)

Sources: IPEDS 2011, 2012, 2013

Notes: Variables are computed for subfields when BAs are listed in those areas. Fraction of each group majoring in business and the conversion ratios are weighted averages using the number of BAs (by sex) as the weight. See also notes to Table 1.

Table 3: Statistics on the “Top 100” Universities (alphabetized by state), 2011-2013

Notes: Averages for 2011-2013 are given. “Top 100” universities is given by the *US News and World Report* list combined for 2011 and 2013. Conversion ratio is (Male Econs/Male BAs)/(Female Econs/Female BAs) and is the average of the conversion ratio computed for each of the three years. n.a. = insufficient number of women to compute a conversion ratio or no business major.

^a Computed without zeros.

Sources: IPEDS, 2011-2013.

Notes: Averages for 2011-2013 are given. "Top 100" liberal arts colleges is given by the *US News and World Report* list combined for 2011 and 2013. Conversion ratio is (Male Econs/Male BAs)/(Female Econs/Female BAs) and is the average of the conversion ratio computed for each of the three years. n.a. = insufficient number of women to compute a conversion ratio or no business major.
