THE ECONOMIC LOGIC

3

イロト イヨト イヨト イヨト

I, pencil

I, Pencil My Family Tree as told to Leonard E. Read

I am a lead pencil—the ordinary wooden pencil familiar to all boys and girls and adults who can read and write.

Writing is both my vocation and my avocation; that's all I do. You may wonder why I should write a genealogy. Well, to

begin with, my story is interesting. And, next, I am a mystery —more so than a tree or a sunset or even a flash of lightning. But, sadly, I am taken for granted by those who use me, as if I were a mere incident and without background. This supercilious attitude relegates me to the level of the commonplace. This is a species of the grievous error in which mankind cannot too long persist without peril. For, the wise G. K. Chesterton observed, "We are perishing for want of wonder, not for want of wonders."

I, Pencil, simple though I appear to be, merit your wonder and awe, a claim I shall attempt to prove. In fact, if you can understand me—no, that's too much to ask of anyone—if you can become

aware of the miraculousness which I symbolize, you can help

(日)

Comparative advantage

DEMOCRACY AND TRADE

3

< □ > < □ > < □ > < □ > < □ > < □ >

Commerce is a cure for the most destructive prejudices wherever we find agreeable manners, there commerce flourishes; and that wherever there is commerce, there we meet with agreeable manners.

ICA: Democracy and Trade

Why the Move to Free Trade? Democracy and Trade Policy in the Developing Countries

Helen V. Milner with Keiko Kubota

Abstract Rising international trade flows are a primary component of globalization. The liberalization of trade policy in many developing countries has helped foster the growth of these flows. Preceding and concurrent with this move to free trade, there has been a global movement toward democracy. We argue that these two trends are related: democratization of the political system reduces the ability of governments to use trade barriers as a strategy for building political support. Political leaders in labor-rich countries may prefer lower trade barriers as democracy increases. Empirical evidence supports our claim about the developing countries from 1970– 99. Regime change toward democracy is associated with trade liberalization, controlling for many factors. Conventional explanations of economic reform, such as economic crises and external pressures, seem less salient. Democratization may have fostered globalization in this period.

		В		

In a democracy, the number of people who have a say on who rules is larger
